

Overall structure and five-function crosswalk

Taskbook function → spatial translation

1. Full-stack AI autonomous innovation system

Full-stack test corridor / Zhongzhiyuan / Green-Link Ring
2. World-class AI innovation ecosystem

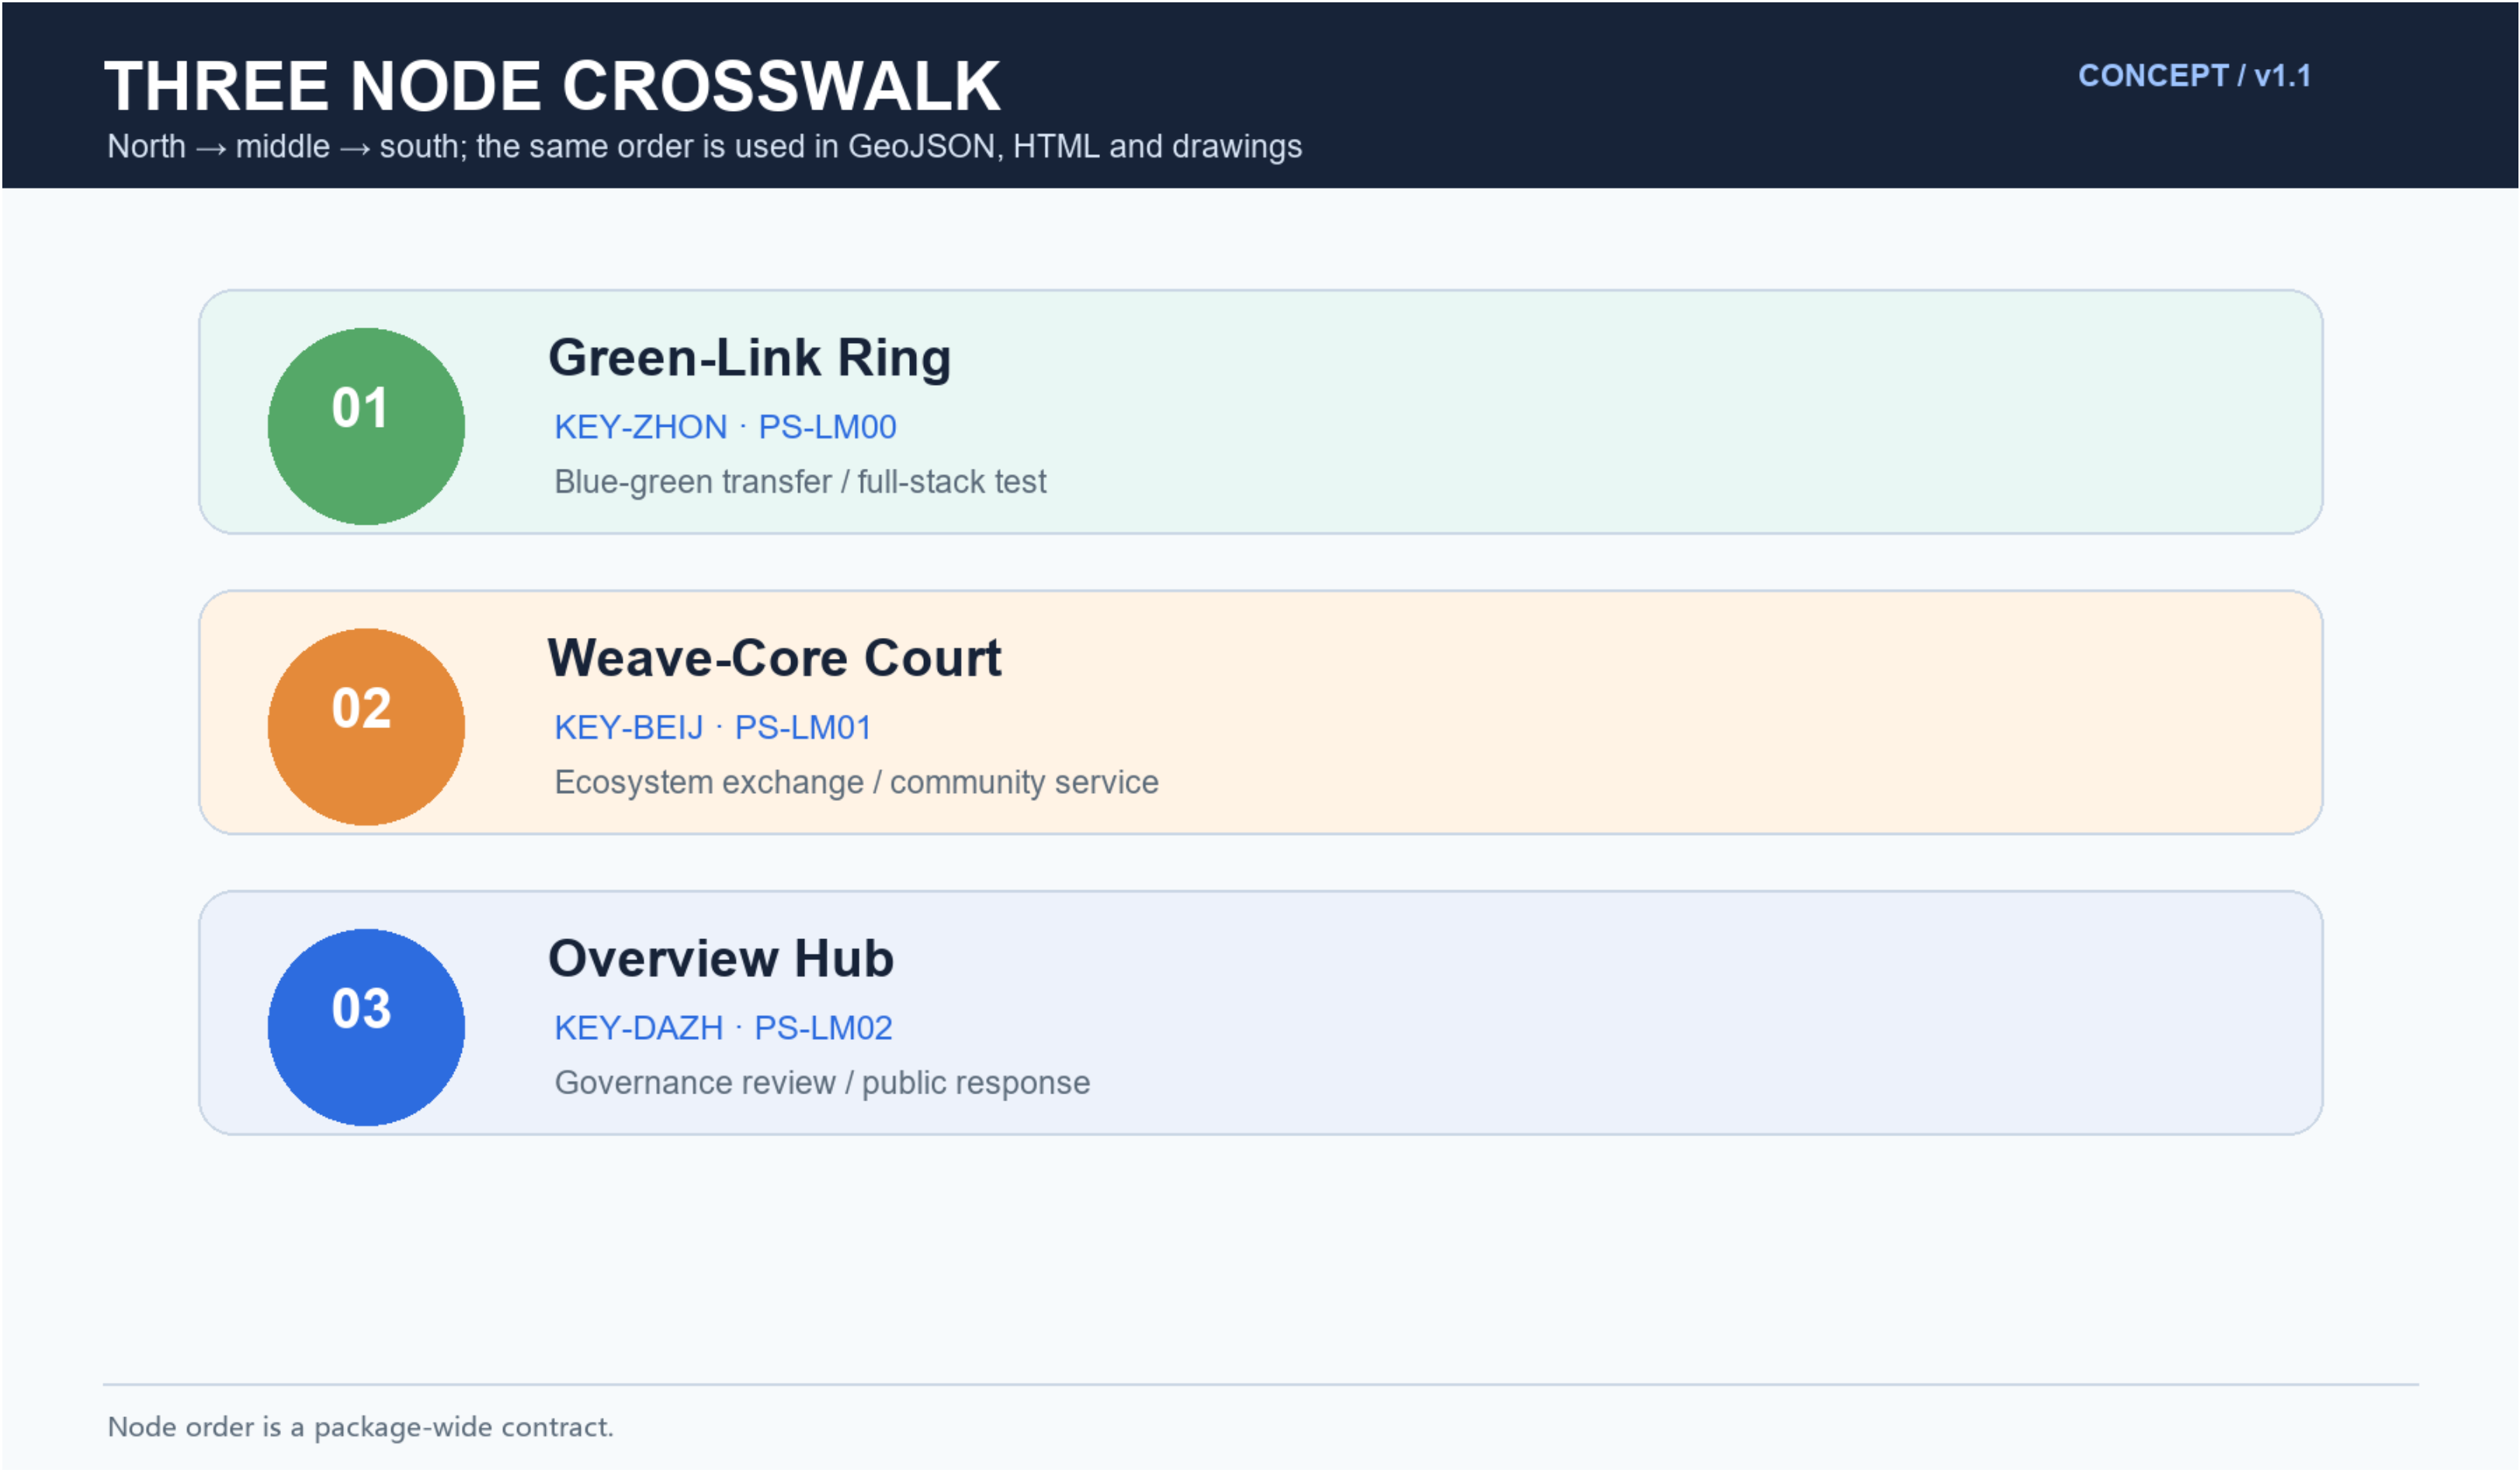

Exchange interface / Beijing AI Origin / Weave-Core Court
3. AI+ scenario enablement

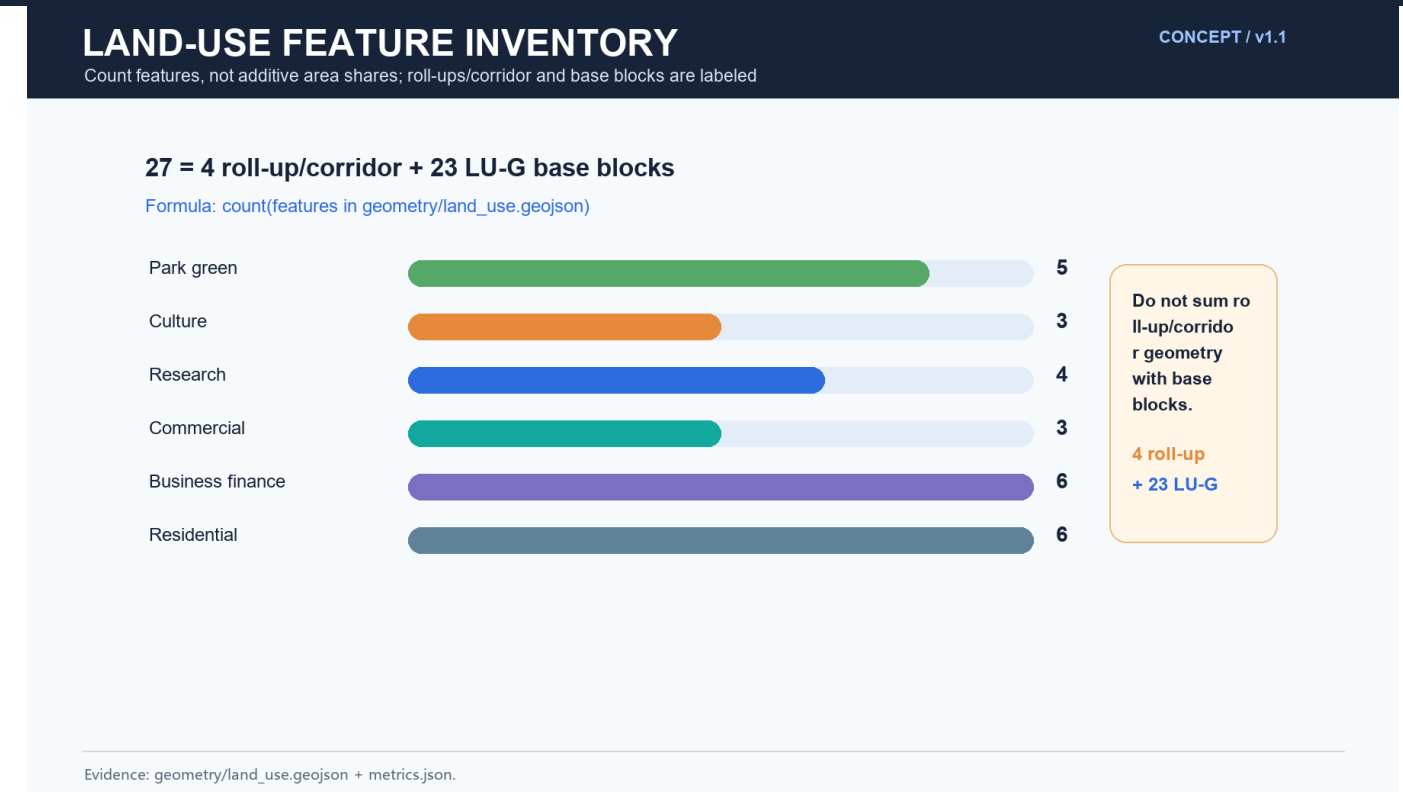

Open scenario belt / Xiaoyuehe wing / all nodes
4. Intelligent AI-vital city

15-minute service / Weave-Core Court / two wings
5. Global voice in AI governance

Public correction loop / Overview Hub / belt-wide

Spatial functions remain a separate translation layer: heritage memory, innovation exchange, commercial life, blue-green recreation and mobility transfer.

Single land-use rule

27 = 4 roll-up/corridor features + 23 LU-G base blocks. Count GeoJSON features; do not sum the two geometry roles as areas.

Operational guardrails

- E-01 Green-Link Ring: continuity ≥90%; accessibility 100%; exit on two failures.
- E-02 Weave+Core Court: wait ≤15 min; satisfaction ≥80%; complaints ≤30 days.
- E-03 Overview Hub: human sign-off 100%; zero identifiable data; immediate exit on breach.
- E-04/E-05: five complete traceable links; 27 count synchronized across outputs.
