

Overview and node sequence

North → middle → south: Green-Link Ring — Weave-Core Court — Overview Hub.

The order is recorded in public_space.geojson and key_areas.geojson.

Five taskbook functions

PR #3878 · CONCEPT · 2/6

Five taskbook functions

THREE NODE CROSSWALK

CONCEPT / v1.1

North → middle → south; the same order is used in GeoJSON, HTML and drawings

01

Green-Link Ring
KEY-ZHON · PS-LM00
Blue-green transfer / full-stack test

02

Weave-Core Court
KEY-BEIJ · PS-LM01
Ecosystem exchange / community service

03

Overview Hub
KEY-DAZH · PS-LM02
Governance review / public response

Node order is a package-wide contract.

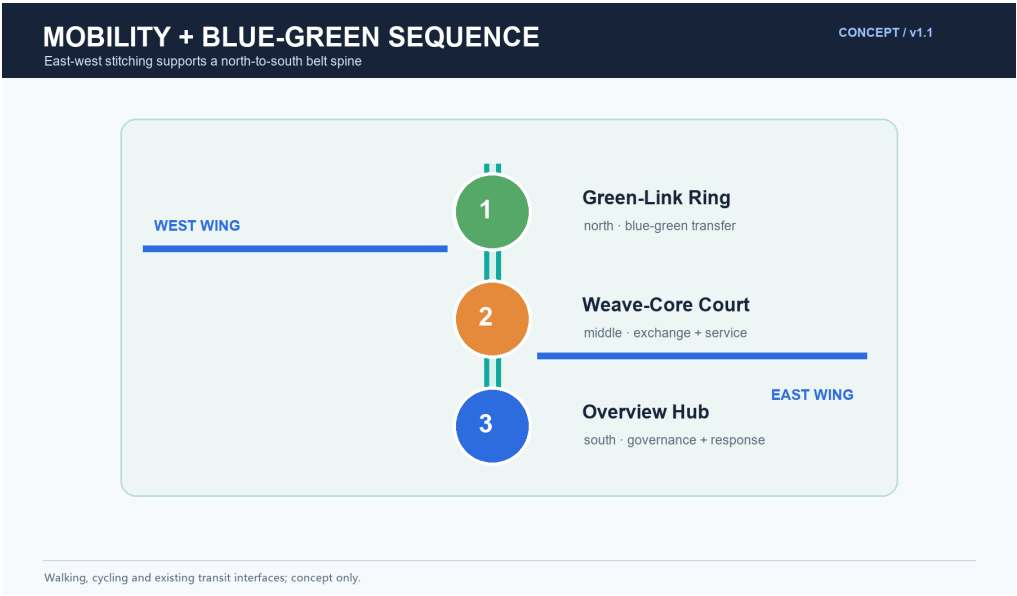

Five source functions are separated from five spatial translations. Every row names an area/node, agent task, scenario, drawing and operation mechanism.

Three areas and two wings

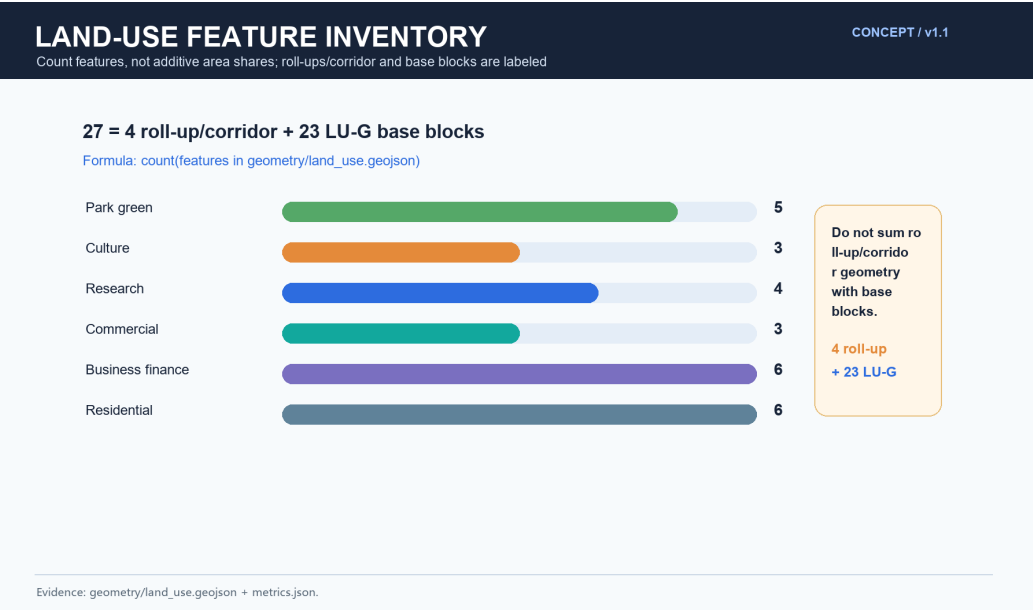

PR #3878 · CONCEPT · 3/6

Three areas and two wings

One greenway axis, three character zones and two east-west wings; all locations remain conceptual.

Land-use inventory

27 features = four roll-up/corridor features + 23 LU-G base blocks. This is an inventory count, not additive area.

Implementation guardrails

Implementation guardrails

IMPLEMENTATION METRICS AND GUARDRAILS

CONCEPT / v1.1

Provisional targets with baseline, responsible roles, human review and exit conditions

Baseline → target → review → exit

E-01

Continuity ≥90%

Accessibility 100%

E-02

Wait ≤15 min; satisfaction ≥80%

Close complaints ≤30 days

E-03

Human sign-off 100%

Zero identifiable data

E-04

Five complete function links

No expansion with a gap

E-05

27 = 4 + 23

No conflicting count

Trigger: pause the pilot and return to review when a safety, privacy or two-cycle threshold failure occurs.

Targets are concept-test guardrails, not statutory commitments.

Baseline, target threshold, responsible role, human review and exit condition are recorded for each concept pilot.

Evidence and compliance

PR #3878 · CONCEPT · 6/6

Evidence and compliance

Evidence links: proposal.md / proposal.en.md, metrics.json, geometry/land_use.geojson, public_space.geojson, key_areas.geojson, compliance_matrix.json, design_depth_matrix.json, visual/index.html and bilingual drawings.

All data are provisional concept evidence; official data and professional review prevail before implementation.
