

JINGZHANG MASTER CONCEPT MASTER • JZ - Belt-Level Overall Concept and Functional Coordination (Concept)

Jingzhang AI Innovation Belt • Jingzhang Railway Heritage Park Green Belt • Haidian

Coordinated research area about 43.6 km2 / overall design area about 11.4 km2 / key areas about 368.4 ha (taskbook text caliber; this package is a provisional concept indication)

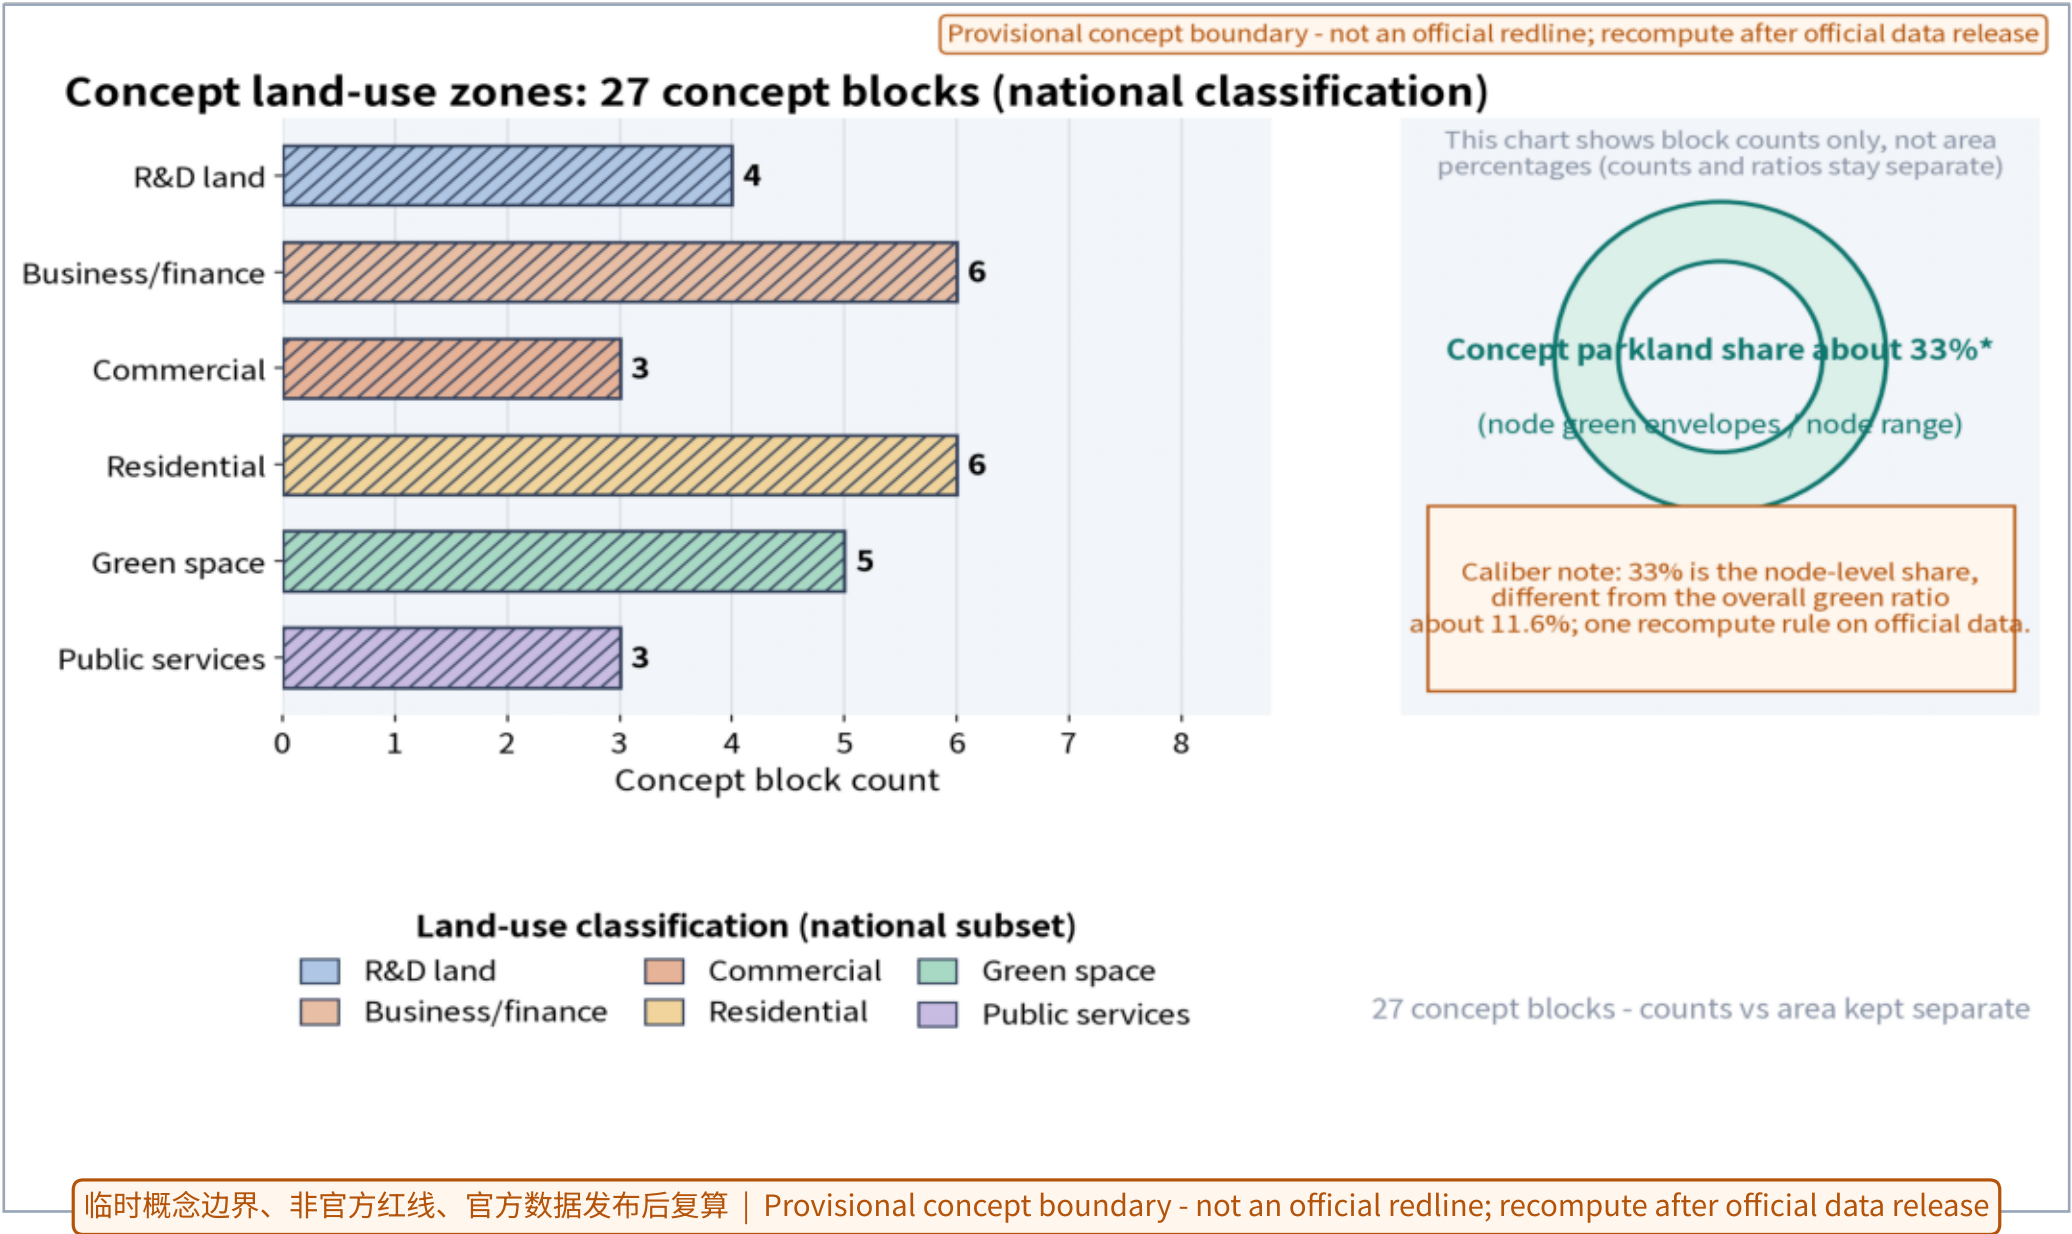

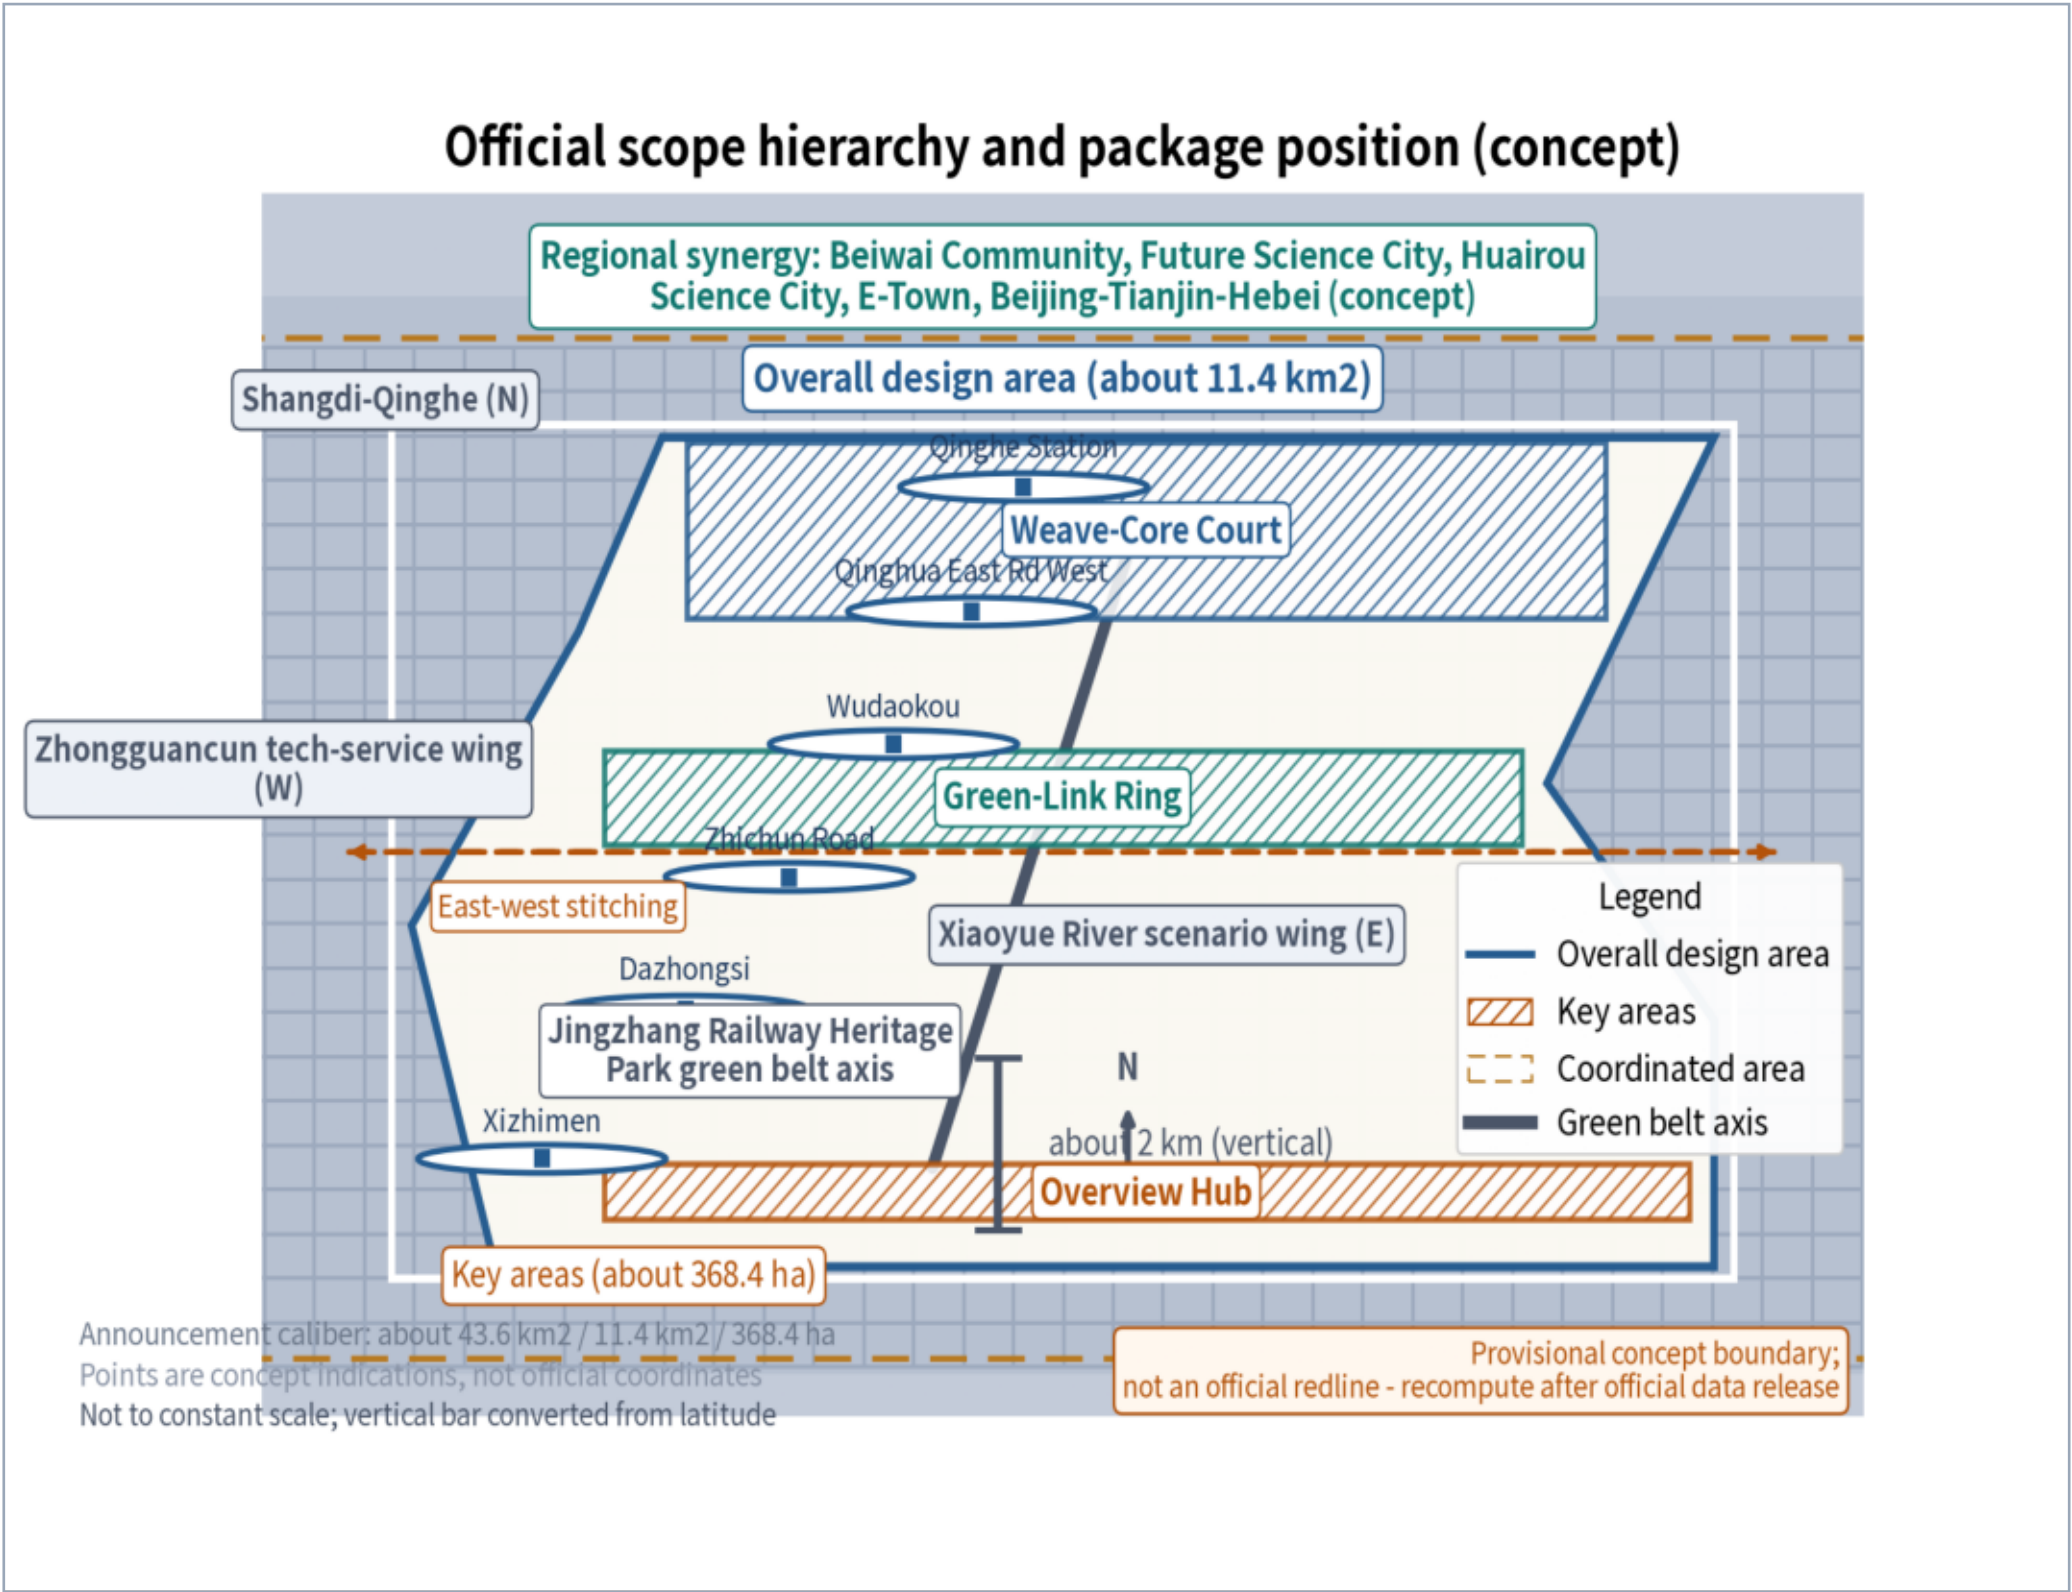

Three positioning pillars, five functions, three-zone/two-wing explicit mapping (AI Origin Community, Zhongzhiyuan Acceleration Zone, Dazhongsi Cluster Zone, Zhongguancun Technology-Service Wing, Xiaoyue River Scenario-Empowerment Wing); regional synergy to Beiwai Community, Future Science City, Huairou Science City, E-Town and Beijing-Tianjin-Hebei.

AI governance, three sentences: anonymized aggregates only, key decisions human-reviewed, no over-surveillance.

This booklet is concept suggestion / reference proposal: no FAR, height, retain-demolish, investment, ridership or capacity figures are concluded; provisional boundaries recomputed after official data release; does not replace existing district plans.

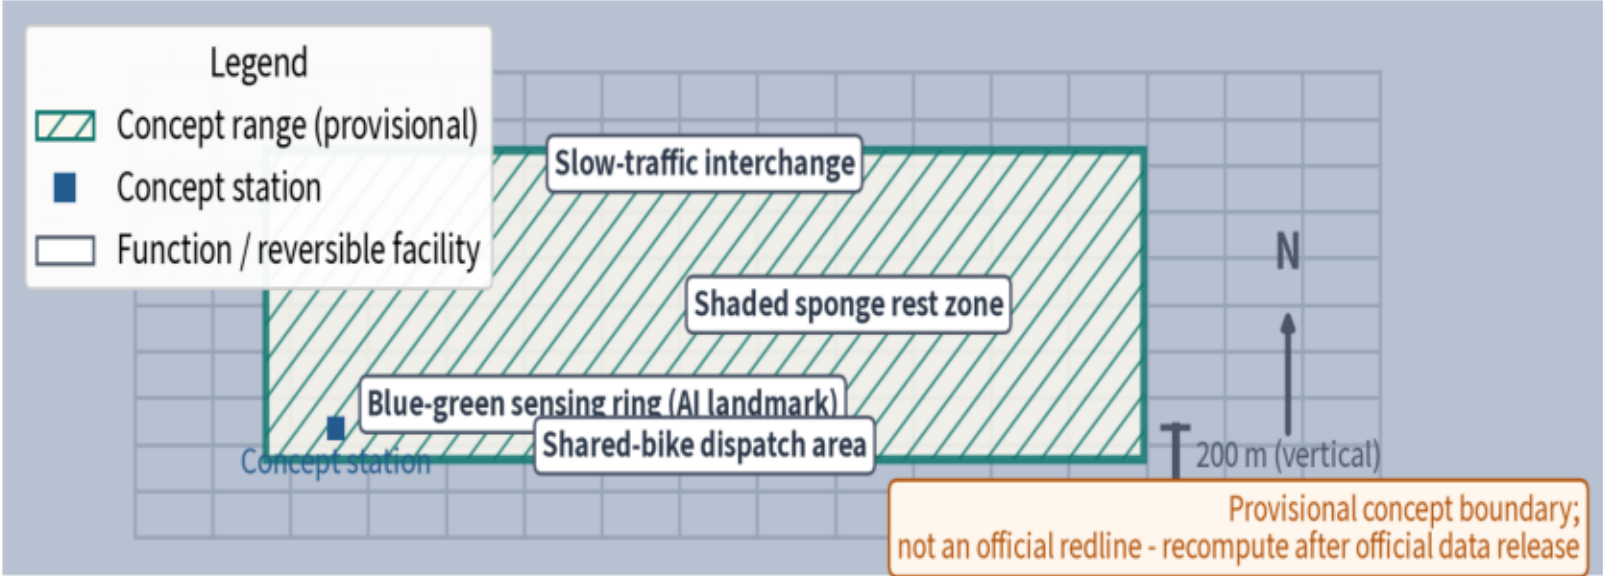

01 Official scope hierarchy and overall design

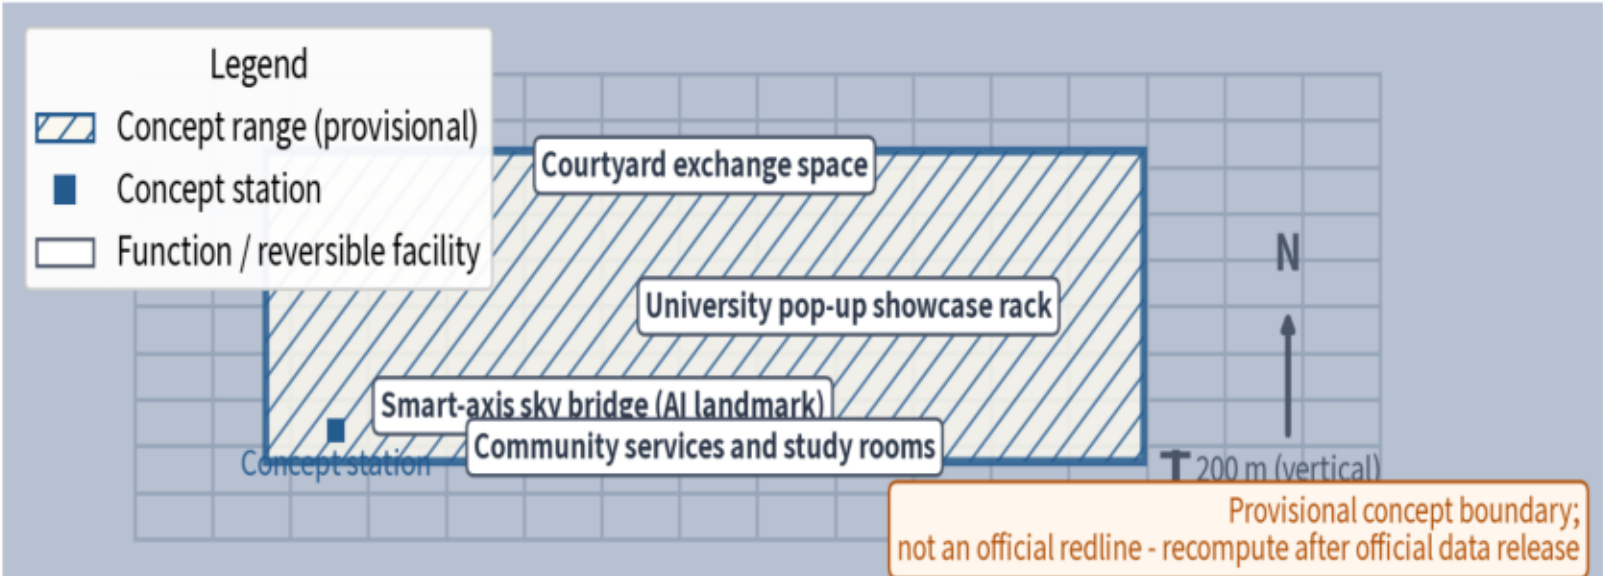

02 Detailed design of the three key nodes

Detailed design of the three key nodes (north at top, matching the proposal)

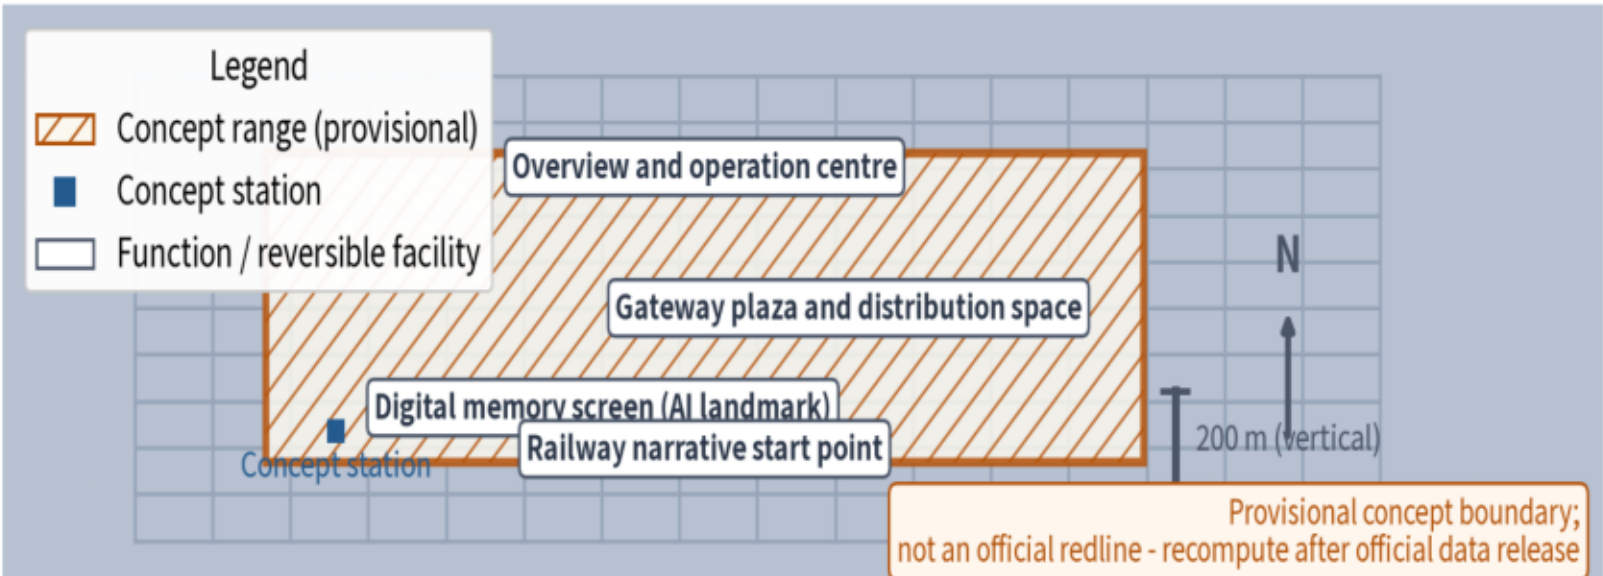

Green-Link Ring | North • slow-traffic and blue-green conversion hub

Weave-Core Court | Middle • functions and community services interwoven

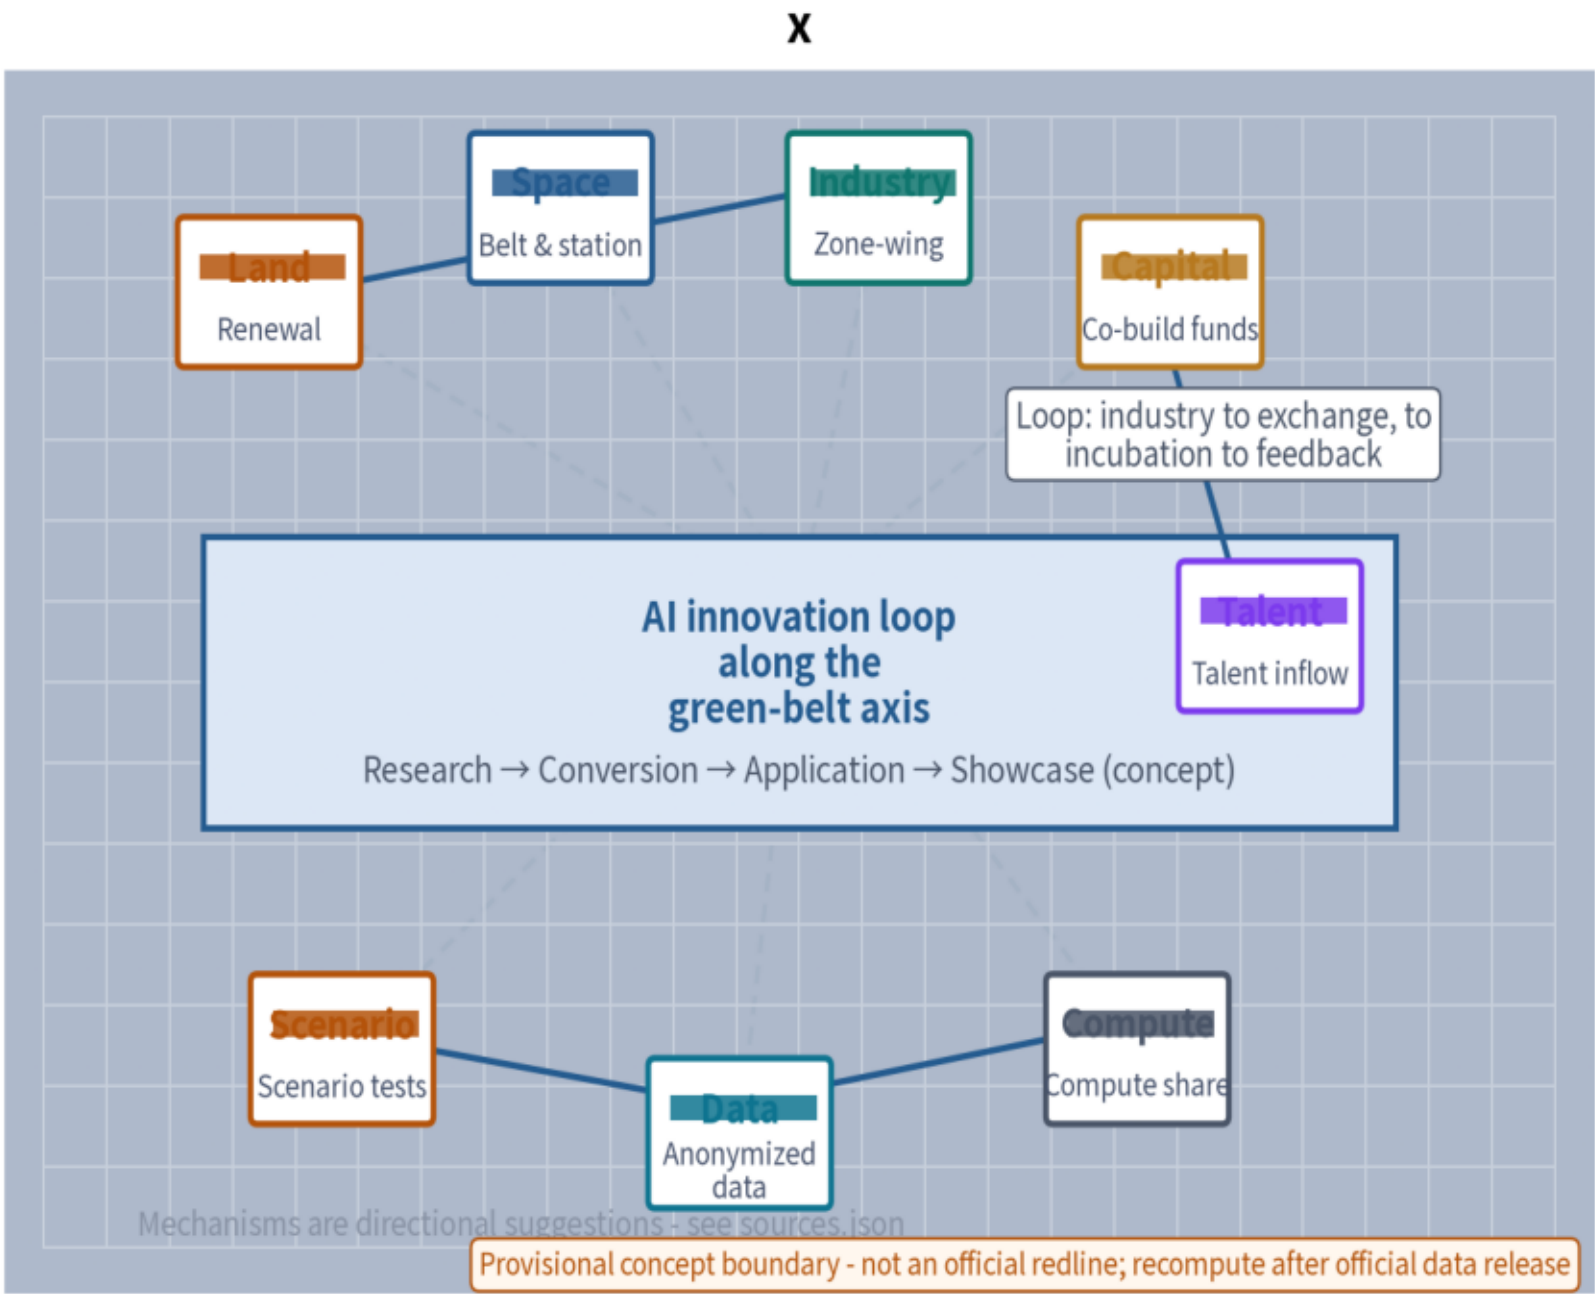

Overview Hub | South • belt gateway and coordination showcase

Concept siting; to be re-validated through planning, heritage and authority assessment

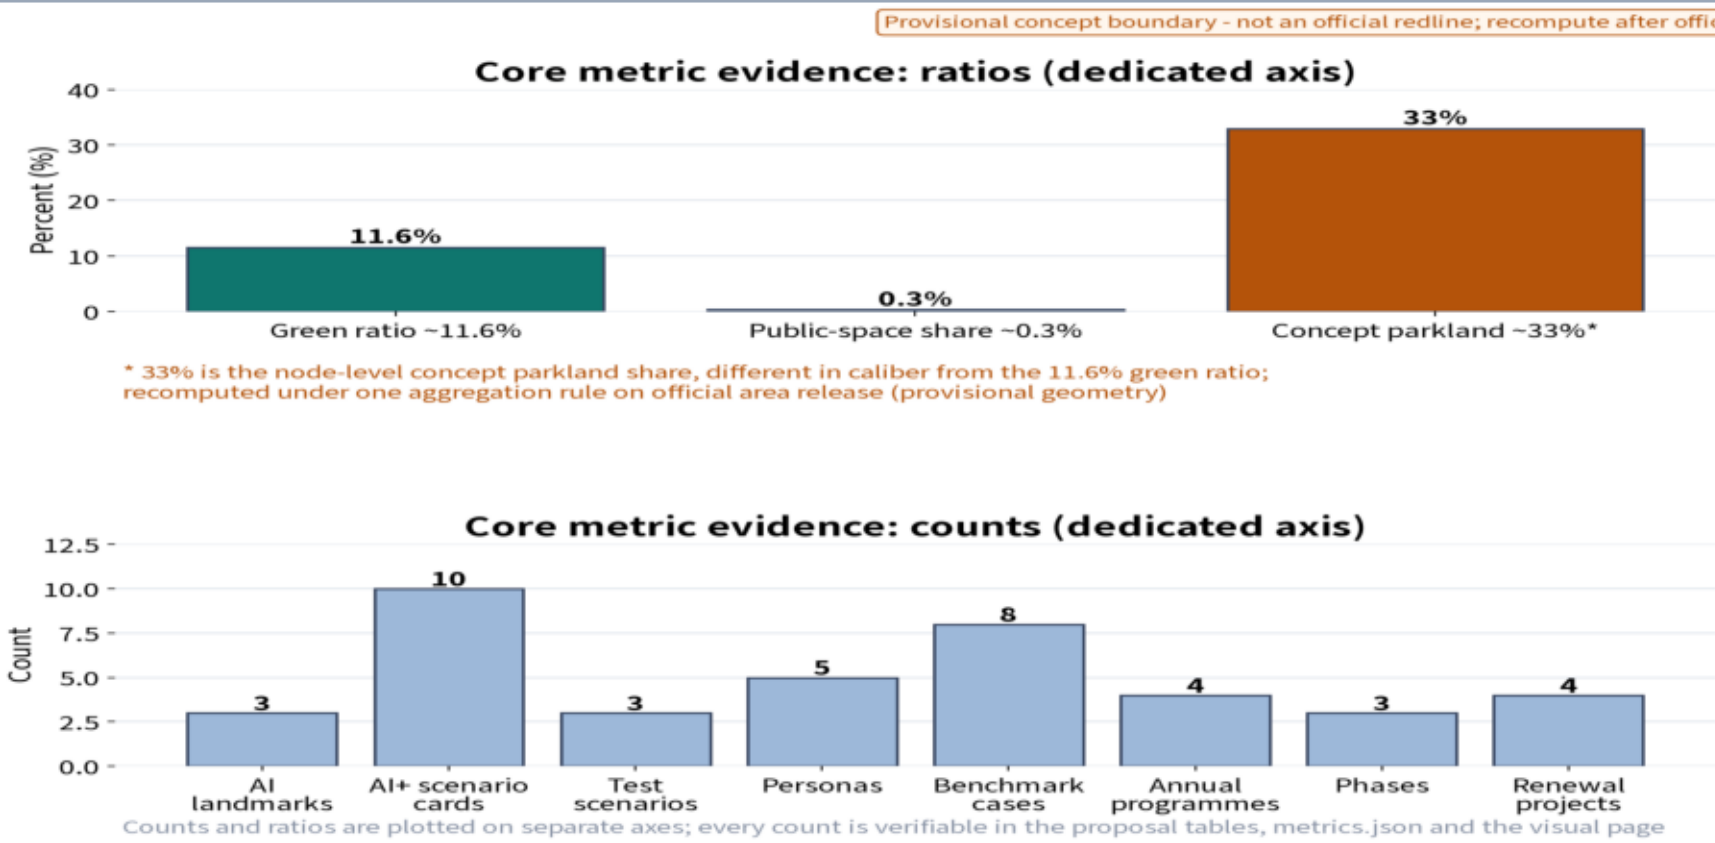

Honor display system and reversible component library: lightweight, demountable, reversible, pilots can exit.

03 AI ecosystem, scenario cards and industry tests

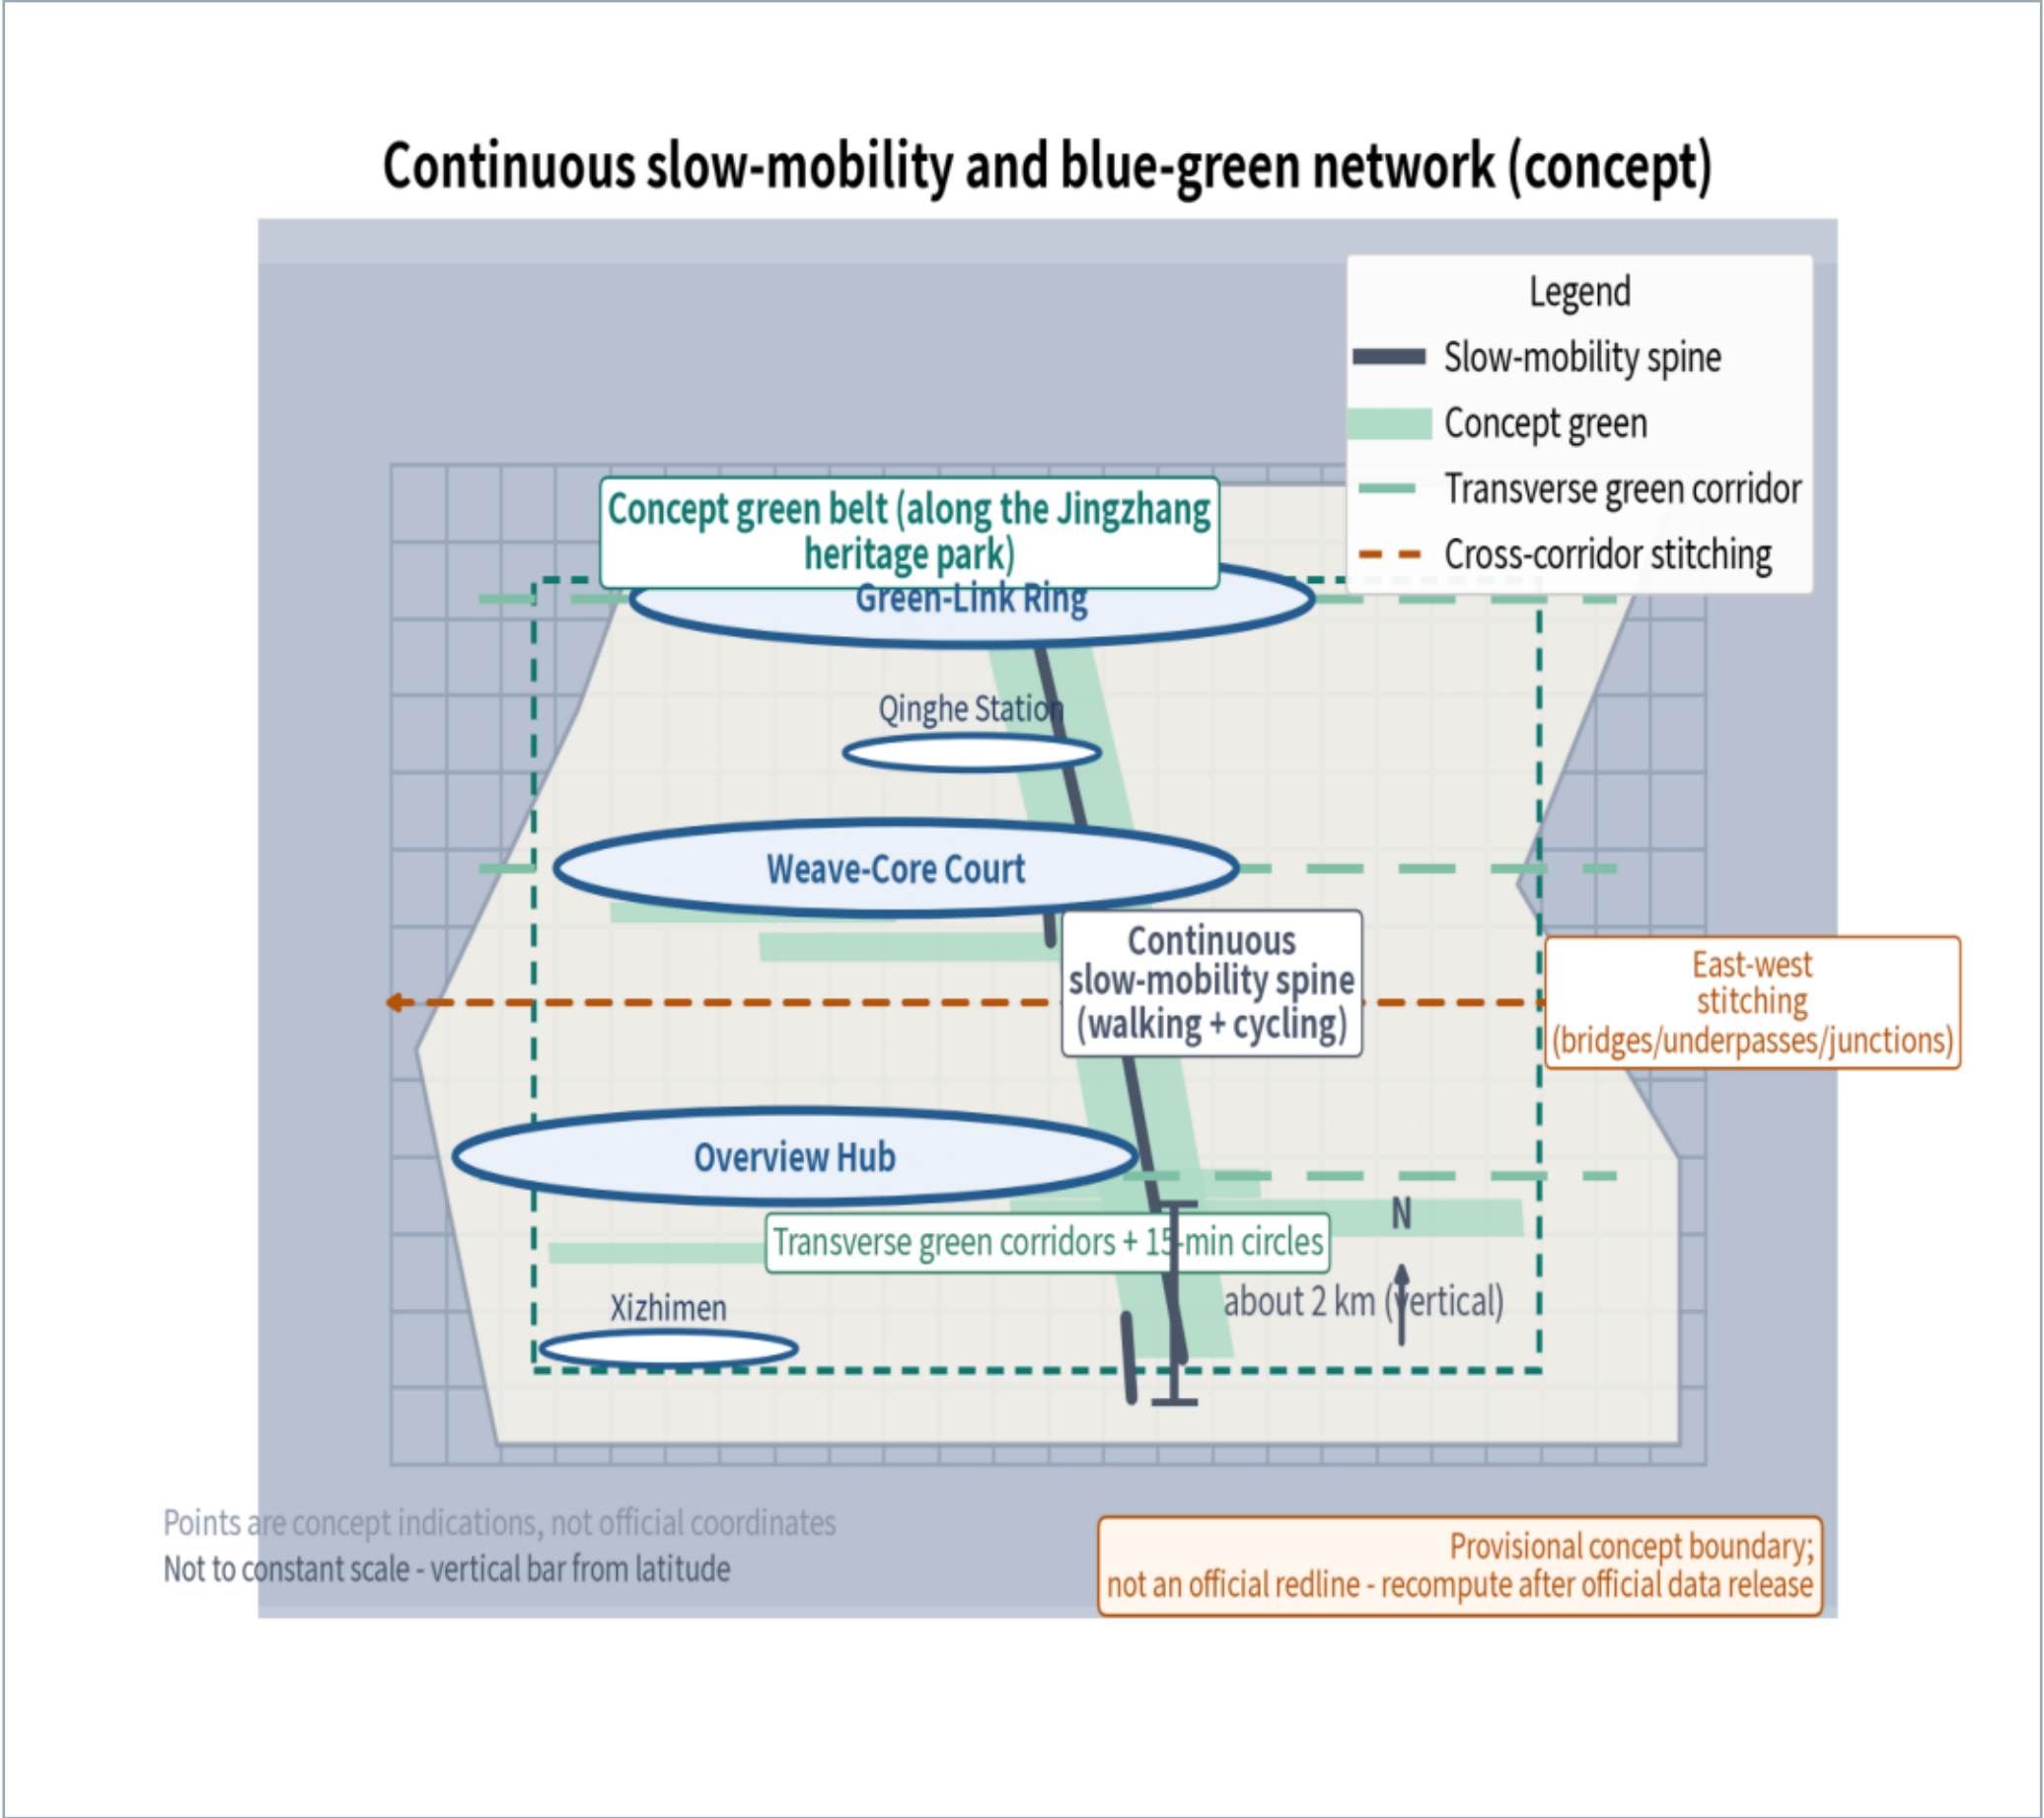

Scenario cards S-01..S-10 (industry/space/transport/public services/culture/governance) - test-validation scenarios T-01..T-03 - 5 personas - 8 benchmark cases (sources in sources.json) - 4 annual programmes (JINGZHANG+ family).

AI technical protocols, four steps: model evaluation / data quality / error stratification / runtime monitoring.

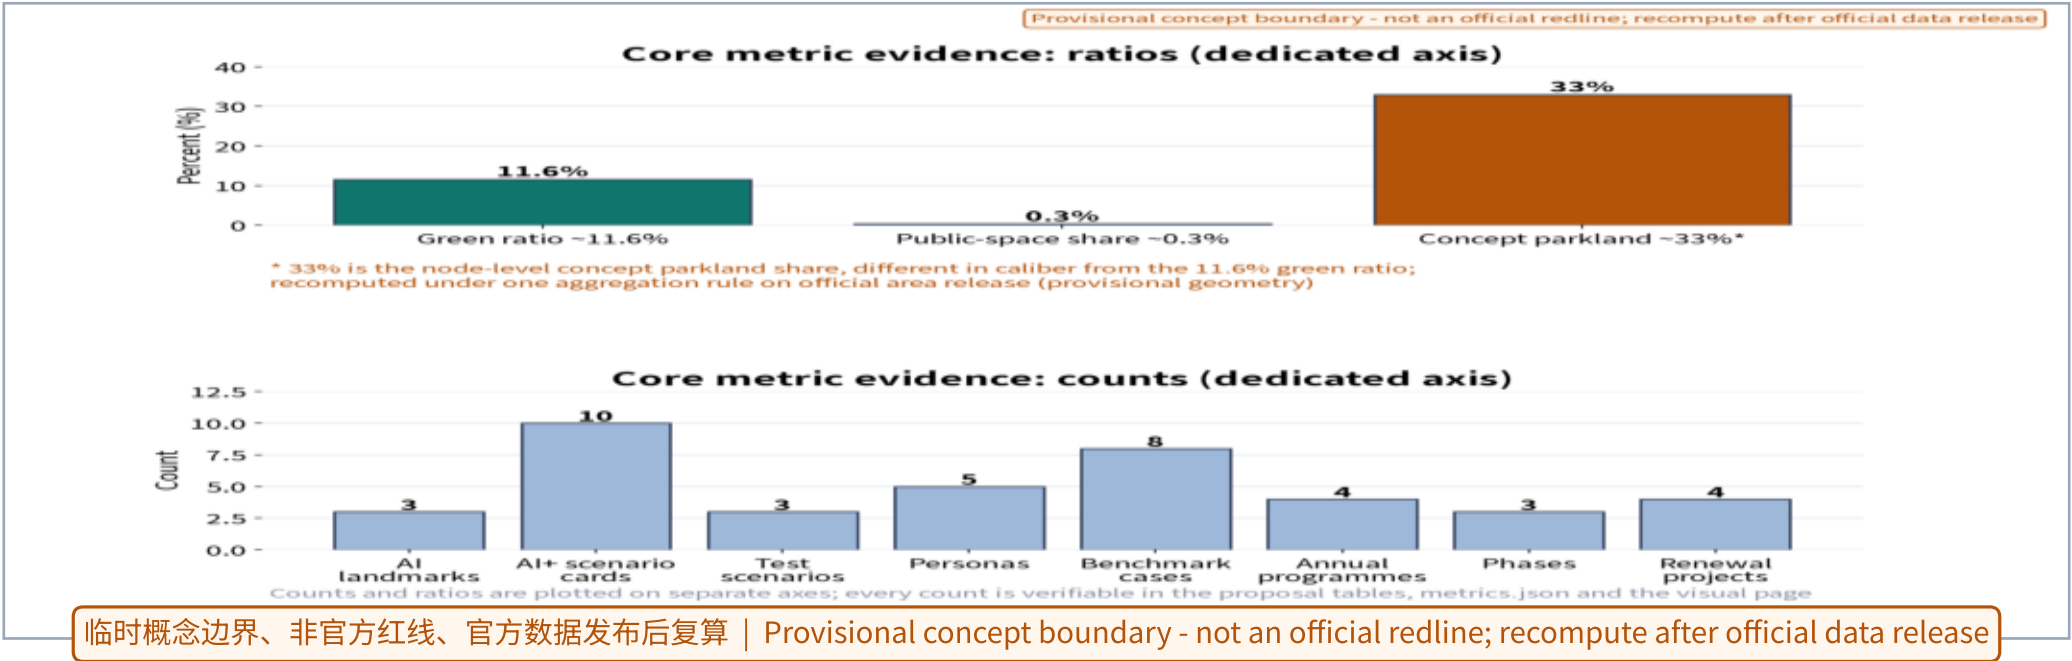

04 Slow-mobility and blue-green network; metric evidence

Indicators are displayed at reduced precision (e.g. green ratio about 11.6%, concept parkland about 33%*); 33% is the node caliber, different from 11.6%; one recompute rule in the proposal.

Counts and ratios are plotted on separate axes; every count is verifiable in the proposal tables and metrics.json.

05 Phasing, annual programmes, risk and compliance

Phase	Main tasks	Lead / collaborators	Gate and exit
Near 1-3 y	Break gaps, Overview Hub pilot	District coordination leads	Annual evaluation
Mid 3-5 y	Courts, ring, stitching	Construction body leads	Mid-term evaluation
Far 5-10 y	Full-line growth, operation	Joint meeting leads	Five-year re-review

Five-dimension risks (boundary/traffic organisation/data boundary/technology maturity/public acceptance) registered in risk.json; copyright and provenance ledger in sources.json; brand names treated as internal working codenames until clearance.

This booklet is concept suggestion / reference proposal: no FAR, height, retain-demolish, investment, ridership or capacity figures are concluded; provisional boundaries recomputed after official data release; does not replace existing district plans.
