

PROVISIONAL

元胞智城 | 区域协同与三节点总览

五类区域接口不是合作承诺；统一走公开能力卡→匿名指标→人工复核→小试→退出/交接。

三层范围：统筹研究 / 总体设计 / 重点区域；边界、面积与用地均为 provisional。

PROVISIONAL

三处重点区 | 节点、地标与组件

节点是空间结构；L1—L3 是独立 AI 地标目录项，P01—P05 是可撤公共空间组件。

N1 元胞坊

元胞单元 / 生活 • 研发 • 服务

HUMAN FALLBACK

N2 智纹台

公共接口 / 导视 • 反馈

HUMAN FALLBACK

N3 生长庭

可逆模块 / 活动 • 开发者

HUMAN FALLBACK

L1 京张时间编织门

public value • reversible • operations

INDEPENDENT AI LANDMARKS

L2 开源城市仪表塔

public value • reversible • operations

INDEPENDENT AI LANDMARKS

L3 生长构件档案廊

public value • reversible • operations

INDEPENDENT AI LANDMARKS

P01 遮荫 • P02 人工台 • P03 信息屏 • P04 展陈框 • P05 数据标识

PUBLIC-SPACE COMPONENT LIBRARY

每个组件保留无障碍通行、人工兜底和拆除/维修说明。

PROVISIONAL

慢行与蓝绿 | 节点连续、卡片不重叠

橙色信息卡独立置于右栏；路线图、节点和文字保持留白。

GREEN BELT

N1

RAIL + SHUTTLE + WALKING

N2

N3

L1

橙卡 | 街道响应规则

• 活动时段优先慢行

• 只用匿名汇总指标

• 失联时人工引导

• 安全/无障碍未复核不开放

PROVISIONAL

用地结构 | 27 个 GeoJSON features

land_use_feature_count = land_use_zone_count = 27；两者均表示 feature 数，不表示法定地块数。

PROVISIONAL

指标证据 | 可追踪、可复算、可退出

统一链路：GeoJSON → metrics.json → 图件/HTML/PDF → 矩阵 → self_check；面积和比例均为 provisional。

11.41M m²

1 来源与几何 → 2 公式与指标 → 3 双语输出 → 4 人工复核 → 5 停止 / 交接

来源：metrics.json + geometry/land_use.geojson + proposal.md 精确锚点

Delivery and operating commitments

Scope	Three scopes: regional coordination, overall design, and key-area design. Site boundary, area, and land use remain provisional until authority and access review.
Core idea	The retained spatial sequence is Cell Neighborhood → Smart Weave Platform → Growth Courtyard: living/research, public interface, and reversible activation.
Evidence	27 land-use features are the single count used across geometry, matrices, HTML, and bilingual graphics. Formal metrics are finite geometry-derived values, not statutory conclusions.
Safeguards	Anonymous/offline testing, human fallback, staffed public desks, stop conditions, access review, and a reversible component kit keep the proposal reviewable and operable.
