

Spatial index / Three Areas + Two Wings + three nodes

Key areas / three distinct node plans and sections

Land-use structure / 27 features and two explicit calibers

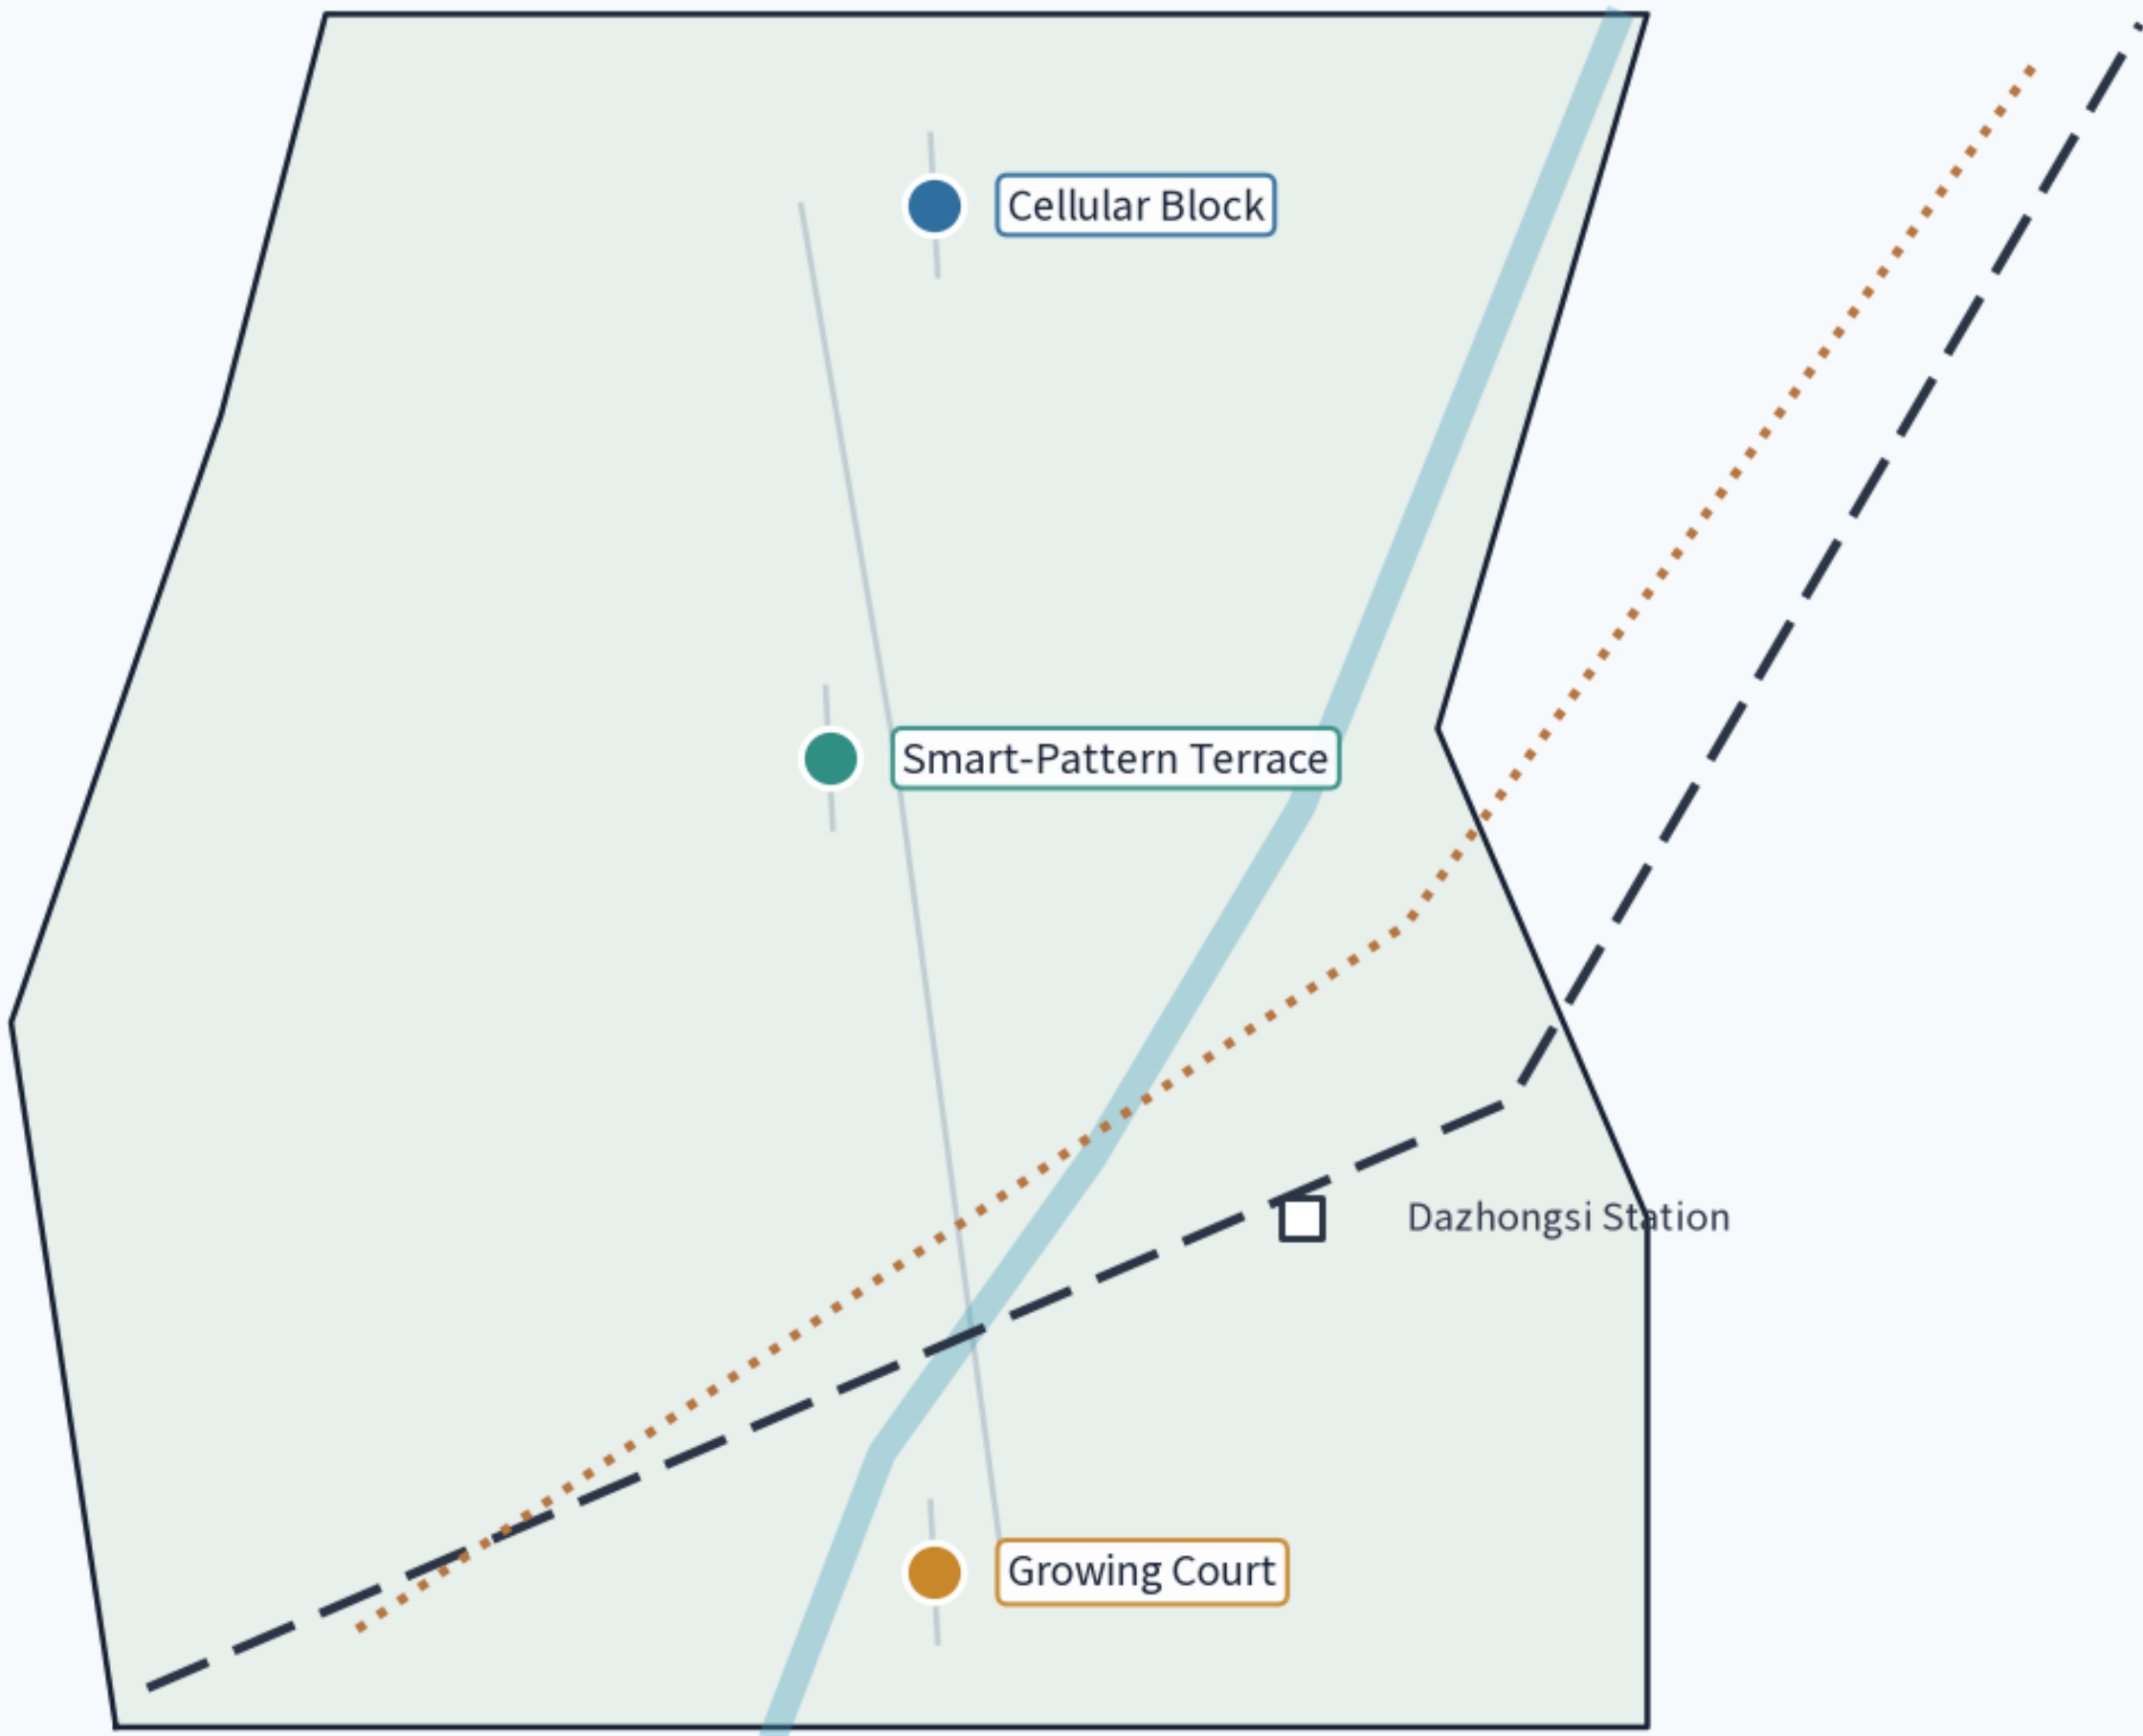

Mobility, blue-green systems and reproducible tests

Slow mobility and blue-green | railway, roads, stations and spatial types

Relational lines only; not traffic approvals or engineering redlines.

PROVISIONAL concept boundary • not an official redline • recalculate after official data

Nodes: N1 Cellular Block • N2 Smart-Pattern Terrace • N3 Growing Court

SPATIAL RELATIONS

- slow-mobility spine
- railway heritage line
- blue-green link
- station access

SERVICE CHAIN

- Detect aggregate need → human review
- Wayfinding prompt → paper/manual fallback
- Facility ticket → stop auto assignment

PROVISIONAL
No official route claim

Measurement contract / two near-term pilots

Core metrics and evidence | 10 cards, 3 protocols + 18 links

PROVISIONAL concept boundary • not an official redline • recalculate after official data

Counts, land-use ratios and test protocols are separate; thresholds are participant-proposed and provisional.

10 independent scenario cards S01-S10	3 common test protocols TP-01-TP-03	18 card-to-protocol links mapping_count

---	---	---

P1 • N1 Cellular Block

baseline: T0 booking-response median
sample ≥ 30 • window 14 days
formula: $(T0 - \text{pilot}) / T0$

proposed pass $\geq 10\%$; manual takeover 100%

P2 • N2 Smart-Pattern Terrace

baseline: T0 paper-route completion/P95
sample ≥ 60 , subgroup ≥ 20 • 3 sessions
formula: completion = success / valid tasks

proposed pass $\geq 85\%$; human help 100%

Evidence: metrics.json • proposal § 4-6 • assumptions A-BASELINE-001 • all thresholds pending professional argument

Reproducible pilot boundary

P1: T0 booking-response median; $n \geq 30$ valid bookings; 14-day window; $(T0 - \text{pilot}) / T0$; participant-proposed pass $\geq 10\%$; manual takeover 100%. P2: T0 paper-route completion/P95; $n \geq 60$, priority group ≥ 20 , three sessions; successes/valid tasks; participant-proposed pass $\geq 85\%$; human help 100%. Failure exit: stop automated assignment, retain paper/manual routes and staffed service, record and review before retry. All baselines and thresholds remain provisional / pending professional argument.
