

CELLULAR AI CITY (CELL • JZ) - New Urban Form Adapted to AI New Quality Productive Forces

Concept proposal | No FAR, height, demolition or engineering conclusions | Provisional boundary; recompute after official data

Overall design area overview

Overall design area overview

Three key areas (concept)

Node (concept)	Minimum pilot unit	Acceptance (concept)
Cellular Block (AI-native mixed-use basic unit)	Minimum pilot unit: one standard cell	Acceptance: mix index, slow-network connectivity, participation
Smart-Pattern Terrace (physical-virtual public space)	Minimum pilot unit: one node plaza +	Acceptance: dwell time, barrier-free pass rate, off-peak spent count (concept)
Growing Court (modular reversible growth block)	Minimum pilot unit: one reversible module	Acceptance: reversibility index, vacancy rate, grow/retract response cycle (concept)

Core metrics (provisional)

Boundary area site_area_sqm	approx. 11.41M sqm
Green ratio	approx. 11.0% (green layer/boundary)
Public land use share	approx. 27.3% (1401 parcels/boundary)
Public space ratio	approx. 0.3%
Scenario nodes / key areas	8 / 3
Scenario cards / test scenarios	12 / 3
Personas / global cases	5 / 8
Phases / annual programs	3 / 3

Recompute trigger: overall recalculation after official geometry/redlines/green-blue lines/land data.

Issues, location basis, plans/sections, reversible modules and constraints: see proposal and A3 booklet.

Phase	Time	Key actions (concept)	Suggested actors
Near	1-3 yrs	Cellular Block pilot + form-evaluation platform + greenbelt slow axis start	Govt lead, enterprise ops, university review, community co-build
Mid	3-5 yrs	Smart-Pattern Terrace & Growing Court pilots + physical-virtual implants + skeleton	plus professional teams, volunteers, merchants
Far	5-10 yrs	Full-form shaping of the belt + stable annual operation system	developer community, international communication
