

CELLULAR AI CITY (CELL • JZ)

New urban form adapted to AI new quality productivity - concept

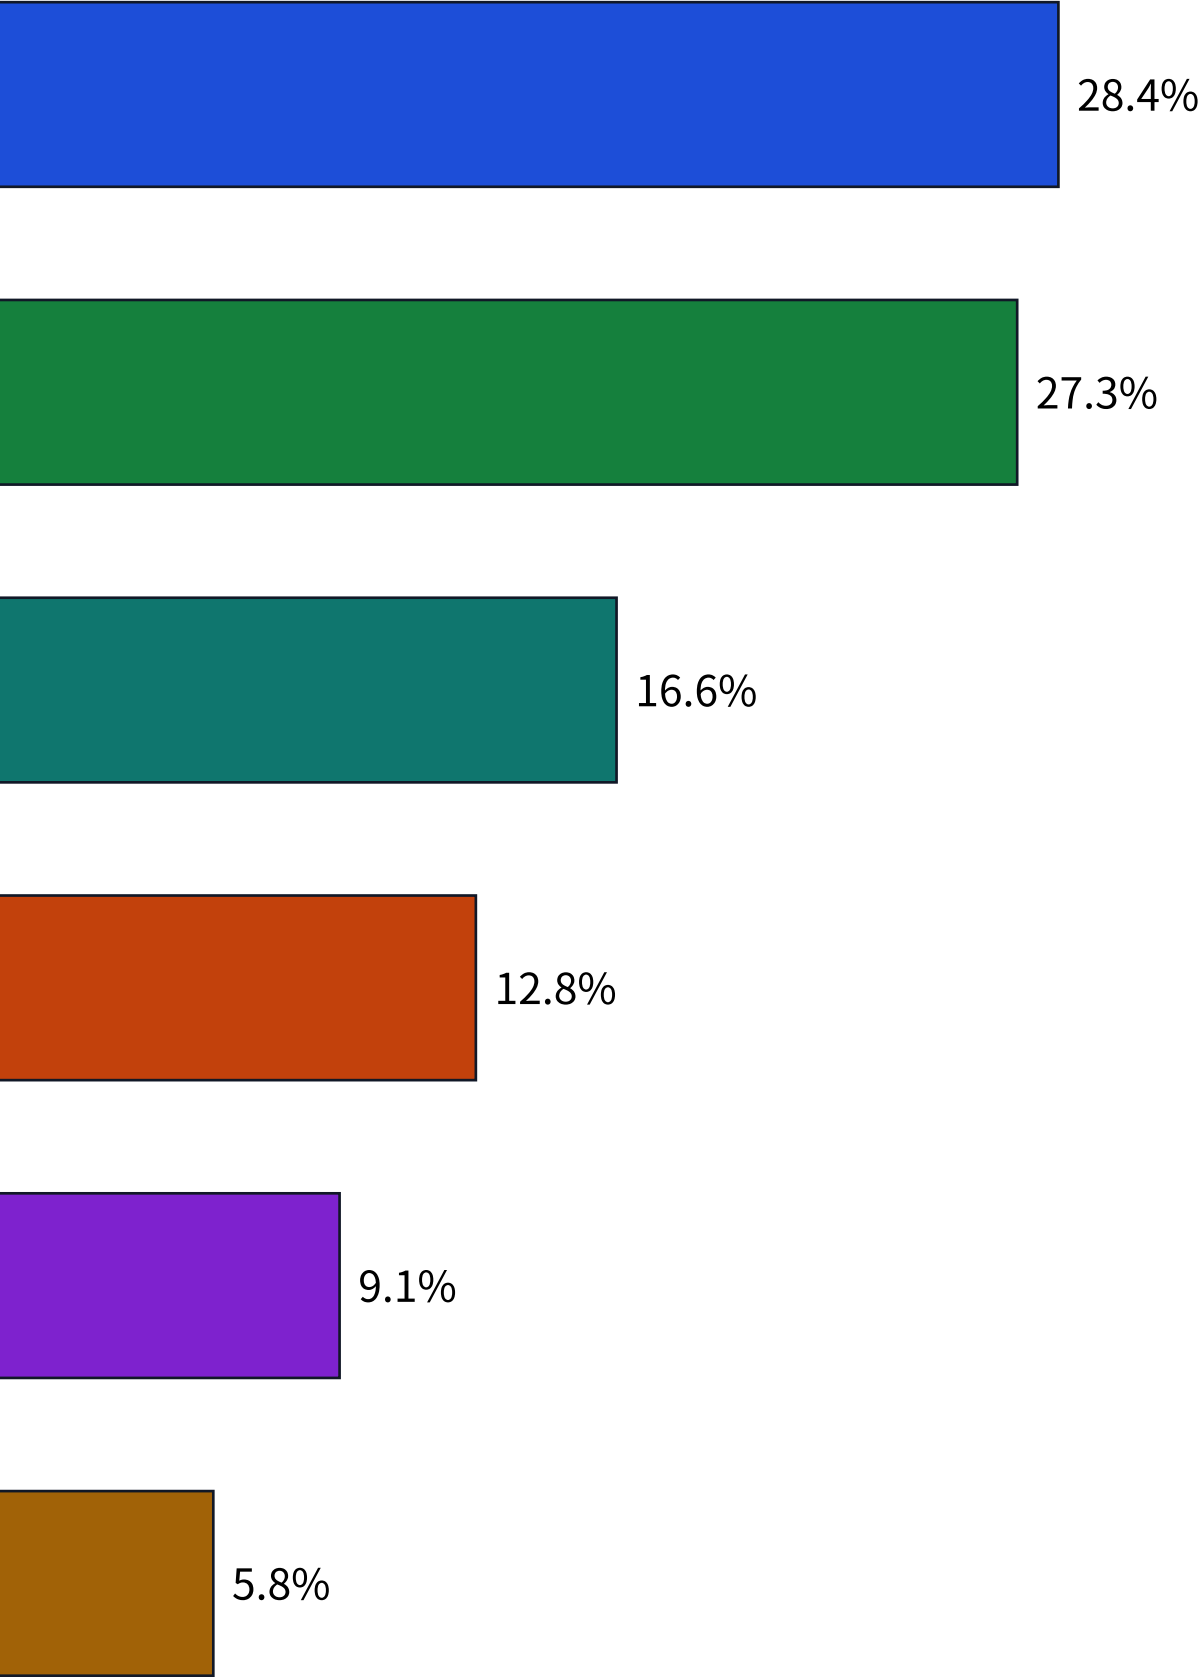

Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (official text)
Three nodes: Cellular Block | Smart-Pattern Terrace | Growing Court | 5 personas | 12 scenario cards | 3 test scenarios

PROVISIONAL concept boundary | Not an official redline | Recompute after official data release

Three-level scope framework (official hierarchy + this package's sub-scope)			
Level	Scope	Official caliber	This package's response
Coordinated research	Industry & future-city research	~43.6 km ² (announcement text)	industry coordination, future-form conce
Overall design	Urban renewal & regulatory-depth design	~11.4 km ² (announcement text)	cellular-block layout & physical-virtual st
Key areas	Detailed design of 3 areas	~368.4 ha (announcement text)	Cellular Block / Terrace / Court concept d

All boundaries in this package are provisional concept geometry, not official redlines; recompute after official geometry.

Land-use structure (caliber 1: parcel share)

Caliber 2: easily-confused metrics named separately

Metric	Value (concept)	Formula caliber
Green ratio	approx. 11.0%	green-space layer / boundary
Park land-use share	approx. 27.3%	land_use 1401 parcels / boun
Public-space ratio	approx. 0.3%	public-space layer / boundary

Both metrics share the same denominator (boundary area) but different numerators
Retain/renovate/demolish: retain-first, no preset demolition scope or scale (concept)

Cellular Block (AI-native mixed-use basic unit)

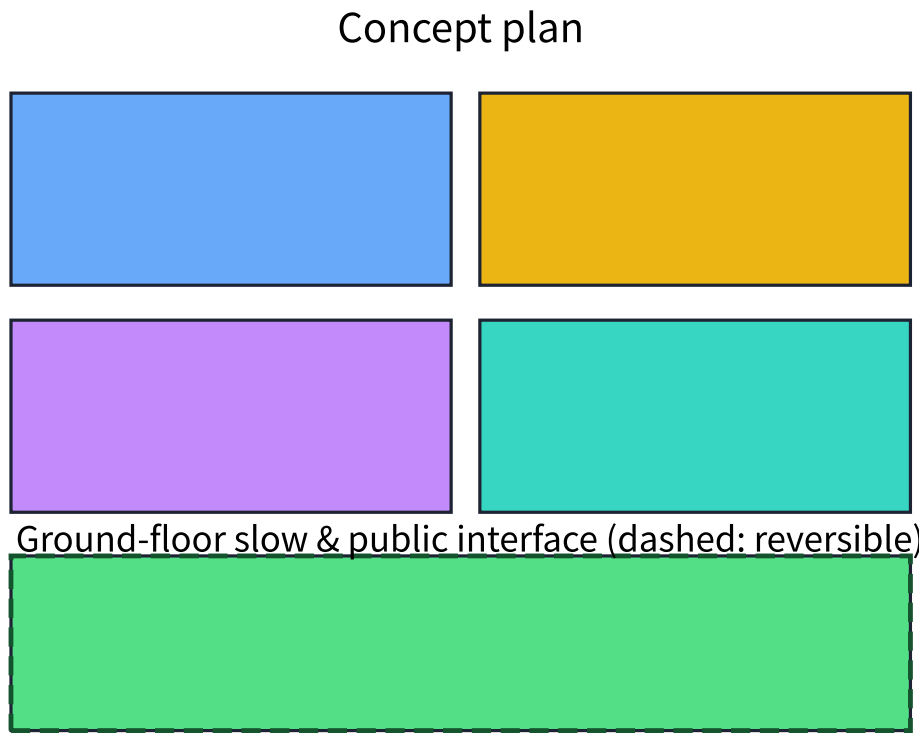

Smart-Pattern Terrace (physical-virtual public space)

Growing Court (modular reversible growth block)

Issues: low-efficiency land and broken slow routes along the rail lines, aging old work/life facilities, data redundancy, loss of vitality

Location basis: build on the Zhongzhiyuan industrial base; start with one basis overlaid physical-virtual experience on existing housing and public space of the old city

PROVISIONAL concept boundary | Not an official redline | Recompute after official data release

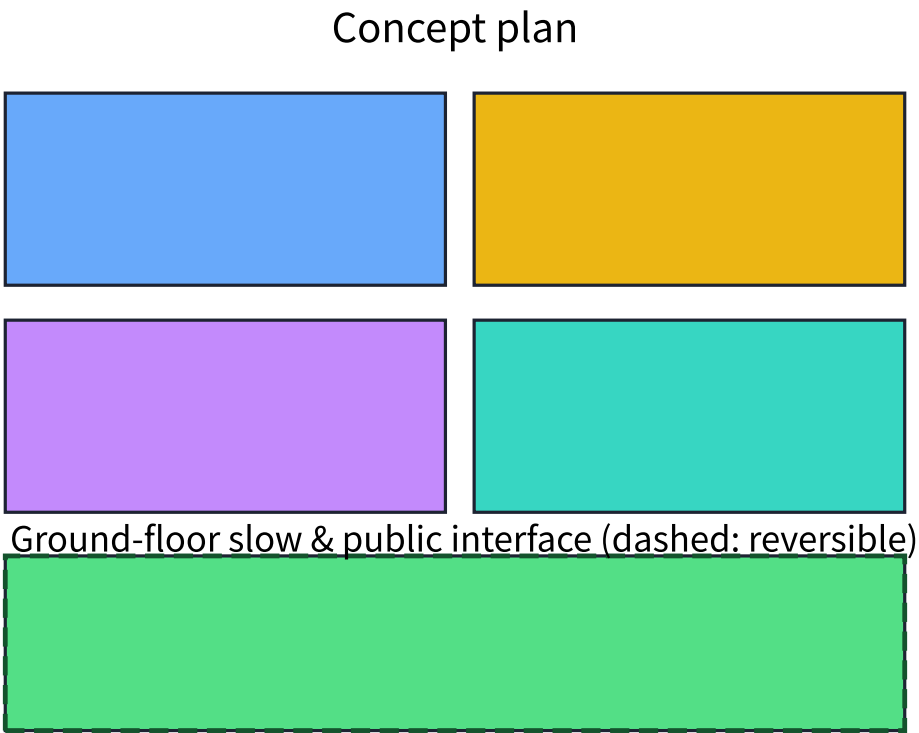

Concept section

Section: living/R&D/incubation/services interlock; slow ground-floor through route

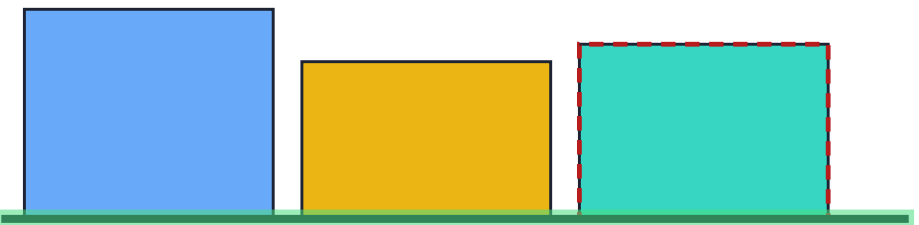

Reversible modules: relocatable partitions, unitized machine rooms,

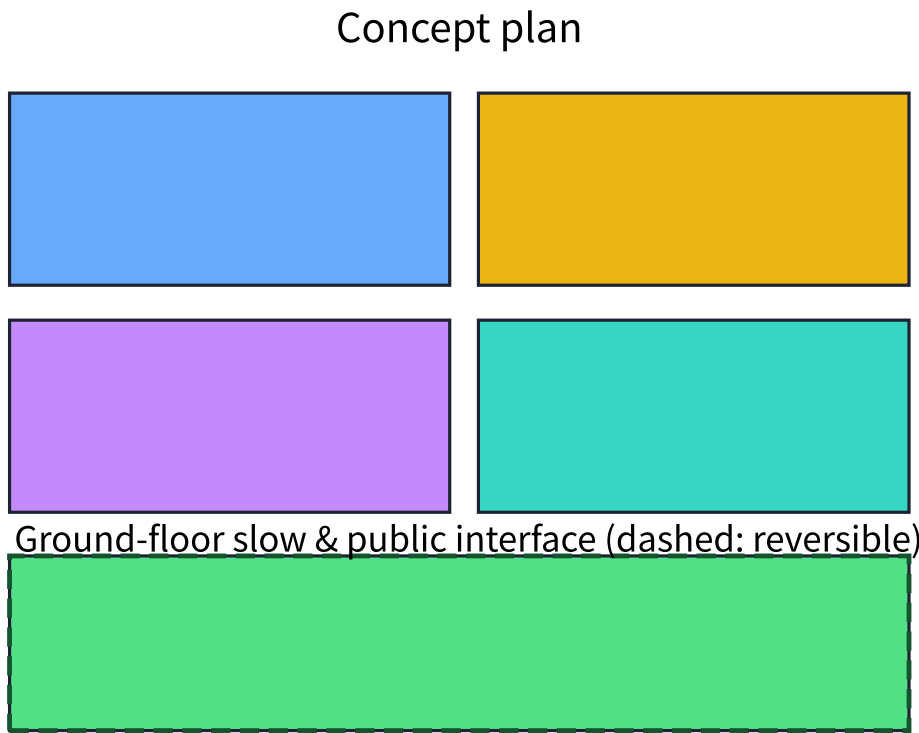

Concept section

Section: through route public space + lightweight installation layer + digital

Reversible modules: light street installation, data, high screens, existing

Concept section

Section: existing base + reversible growth modules + reserved interlock

Reversible modules: existing base, reversible growth modules, reserved interlock

AI innovation ecosystem and scenario system

AI domain	Representative scenario cards	Data & compliance boundary
AI Space	Cellular gate street Cellular market	anonymized aggregation, human review
AI Industry	Growth module application form performance	aggregate statistics only, disclosure
AI Mobility	Load forecast dispatch time-sliced street	edge processing, no over-surveillance
AI Governance	Feedback aggregation forum pulse map	aggregate density, no individual tracking
AI Public Service	Companion barrier-free guide	explicit consent, one-click off
AI Culture	Smart-pattern screen open day art week	reservation, annual renewal

PROVISIONAL concept boundary | Not an official redline | Recompute after official data release

Data governance & inclusion (concept)		Implementation matrix & long-term operation (concept)			
Mechanism	Concept setting	Project type (concept)	Lead / collaborator	Preconditions & dependencies	Cost tier
Aggregation threshold	minimum base per scenario; below threshold, no output	Cellular Block pilot	govt lead / enterprise	baseline survey, public consultation	medium, expert
Retention	per-scenario retention period, then deletion	Terrace installation	operator lead / university	installation expert review, data security	low-medium, assessment
Access control	role-based, least-privilege, audit trail	Court modules	enterprise lead / community	ownership & fire boundaries	medium, capital capacity
Correction/deletion & compensation	dedicated channels and intake desk	Form-evaluation platform	professional lead / government	data-quality protocol, model validation	low, attention
Emergency stop	one-button shutdown for installations and systems				
Alternatives	non-smartphone offline channels, on-site human help, accessibility testing				

Costs are qualitative low/medium/high tiers only; pilots have exit conditions; no government or investment commitment
